Cosa significa lavorare nel settore ICT

COMPONENTS OF ICT

Observatory Systems

Cloud Computing

The term is generally used to describe data centers available to many users over the Internet. Large clouds, predominant today, often have functions distributed over multiple locations from central servers.

Software

Software is a set of instructions, data or programs used to operate computers and execute specific tasks. This is a generic term used to refer to applications, scripts and programs that run on a device.

Hardware

In the context of technology, refers to the physical elements that make up a computer or electronic system and everything else involved that is physically tangible. This includes the monitor, hard drive, memory and the CPU.

Digital Transactions

Digital transactions can be broadly defined as online or automated transactions that take place between people and organizations—without the use of paper.

Communications Technology

Communications technology, also known as information technology, refers to all equipment and programs that are used to process and communicate information.

Digital Data

Digital Data is data that represents other forms of data using specific machine language systems that can be interpreted by various technologies.

Internet Access

Internet access is the process of connecting to the internet using personal computers, laptops or mobile devices by users or enterprises. Internet access is subject to data signalling rates.

Il progresso può rappresentare una nuova opportunità

Dorothy Vaughan, una pioniera dell'informatica e dei diritti civili, è stata la prima afroamericana a essere promossa supervisore alla NASA nel 1949.

Durante la sua carriera, si distinse per la sua capacità di adattarsi rapidamente alle tecnologie emergenti.

Quando i computer iniziarono a sostituire i calcoli manuali, Dorothy intuì l'importanza di padroneggiare i linguaggi di programmazione. Autodidatta e sempre proattiva, imparò il linguaggio Fortran, essenziale per programmare i primi computer IBM utilizzati dall'agenzia.

Non solo acquisì competenze avanzate, ma condivise la sua conoscenza formando molte altre donne afroamericane, aprendo loro la strada verso ruoli tecnici di rilievo.

Dorothy Vaughan - Prima afro-americana ad essere promossa alla NASA nel 1949

Mamma mia quanti Copilot !

#GlobalAzureTorino

Cos'è GitHub Copilot

GitHub Copilot è un assistente, un copilota che aiuta a scrivere codice più velocemente e con meno sforzo, garantendo un maggiore focus sull'attività che stiamo portando avanti, limitando le distrazioni.

[..]GitHub Copilot was the first, I would say, hit product of this generative AI age. And it's the most widely adopted AI developer tools, 1.8 million subs across 50,000 organizations are using it.

And with GitHub Copilot, we are empowering every developer on the planet to be able to access programing languages and programing knowledge in their own native language. Think about that. Any person can start programing, whether it's in Hindi or Brazilian Portuguese, and bring back the joy of coding to their native language. [..]

— Satya Nadella, CEO Microsoft

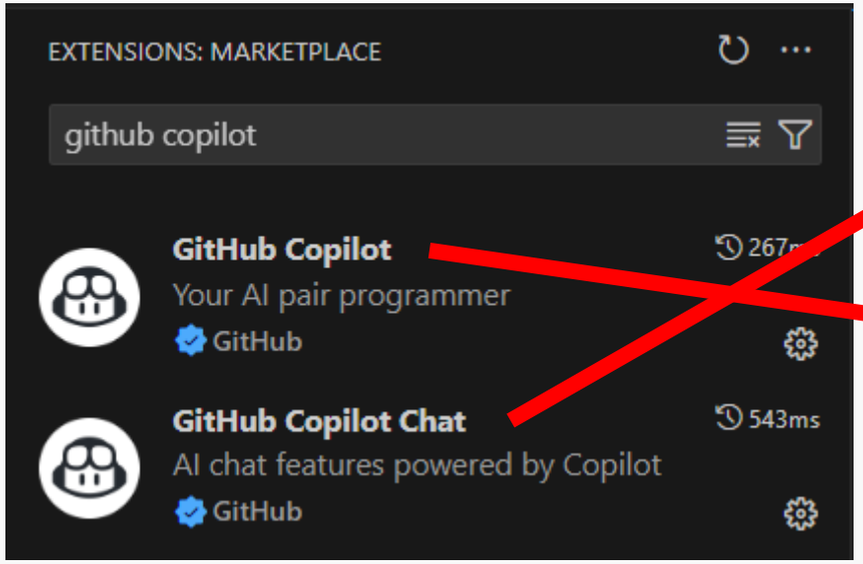

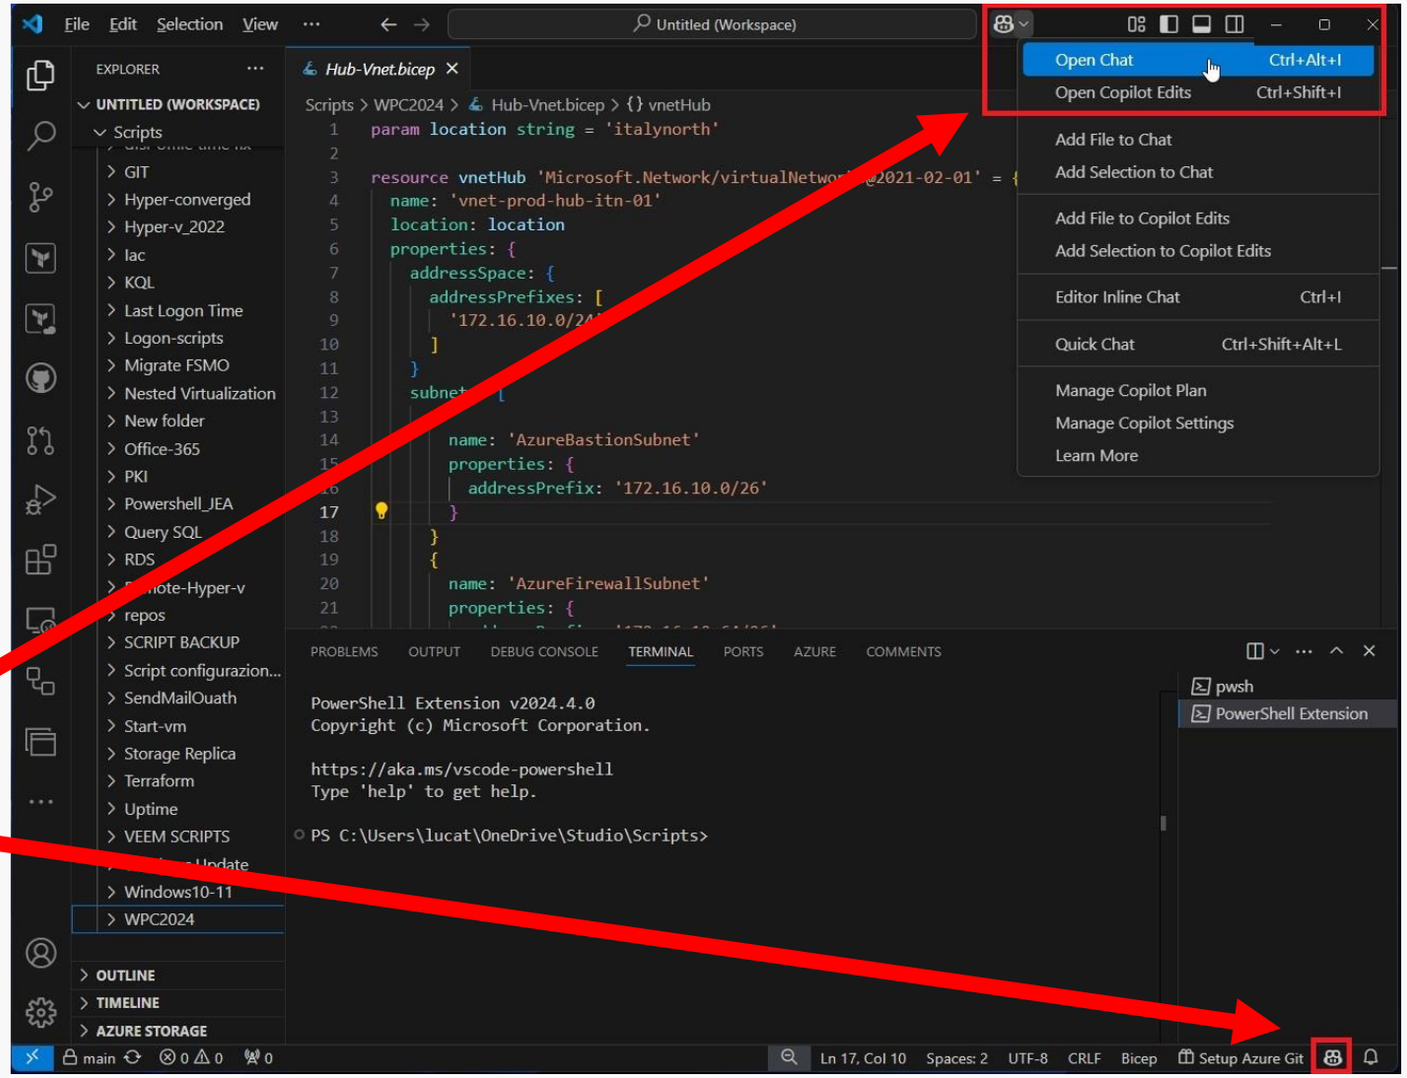

#GlobalAzureTorino

GitHub Copilot in VS Code

GitHub Copilot è presente in VS Code e in altri IDE supportati (Es. JetBrains - NeoVIM).

All'intero di VS Code è possible abilitare le estensioni: GitHub Copilot e GitHub Copilot Chat.

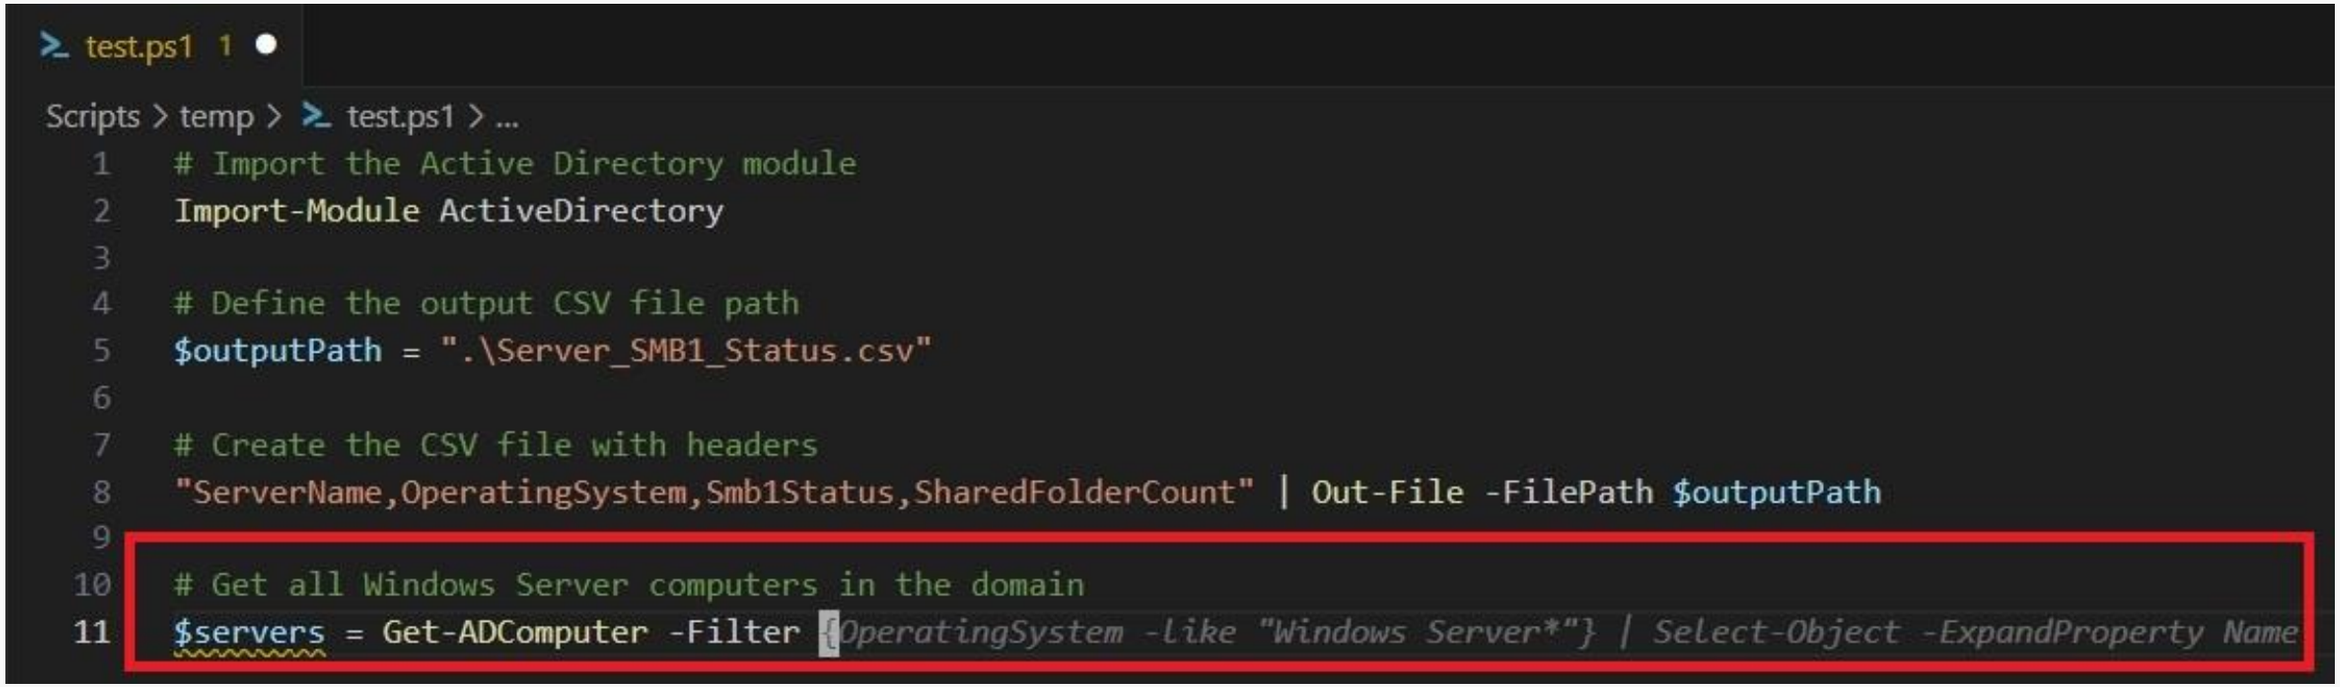

#GlobalAzureTorino

Completamento automatico del codice inserito

Durante la scrittura del codice, GitHub Copilot ci fornisce suggerimenti e indicazioni per completare il codice, cercando di capire cosa stiamo scrivendo.

Ovviamente se la confusione regna sovrana nella nostra mente, Copilot fornirà risultati altrettanto confusi.

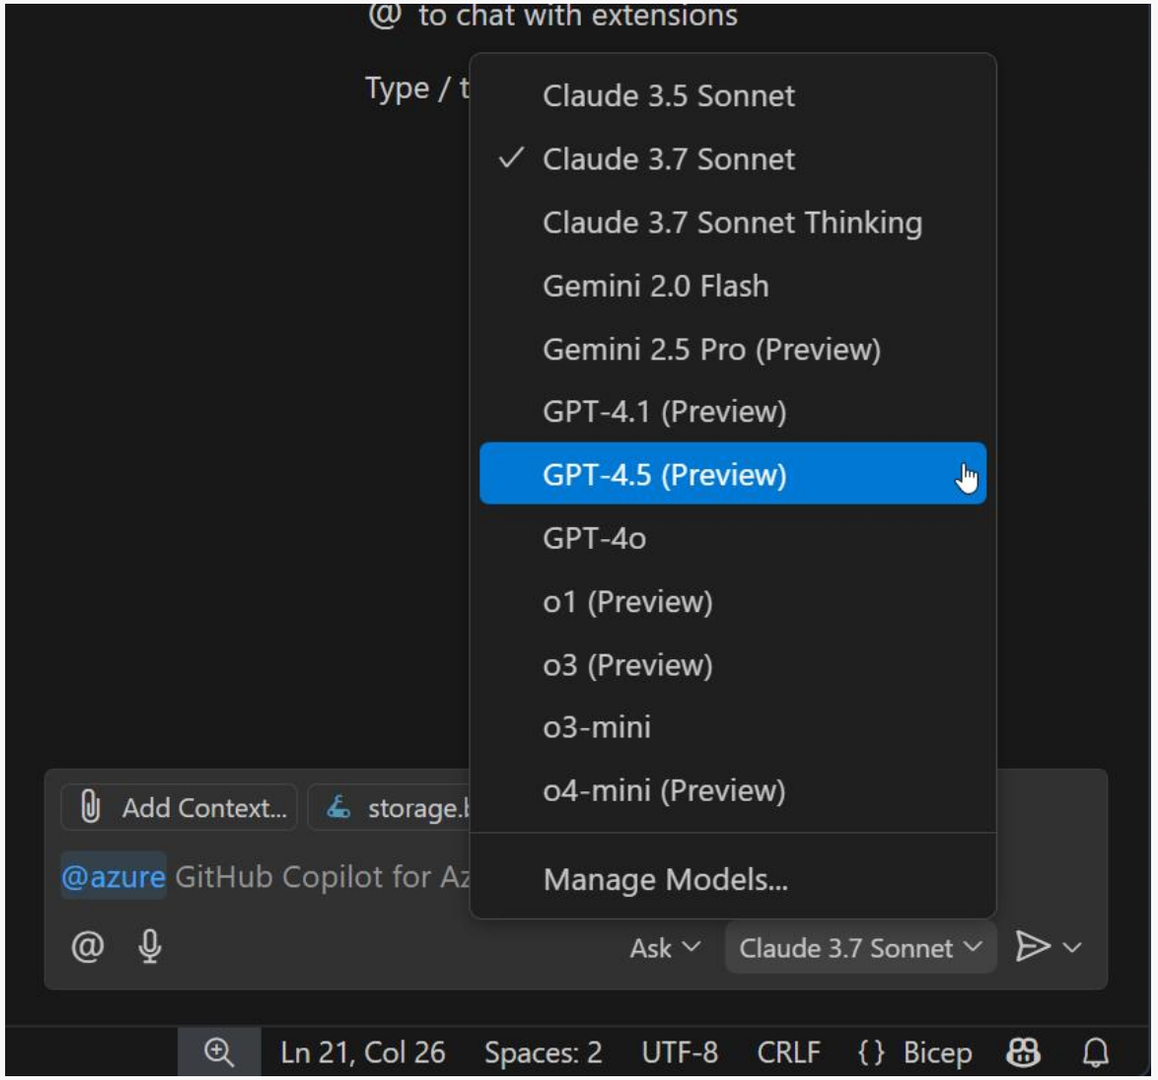

#GlobalAzureTorino

Scegli il modello che preferisci

GitHub Copilot ha di recente introdotto la possibilità di utilizzare modelli differenti all'interno della Chat per ricevere risposte differenti.

Come è possibile vedere dallo screenshot di fianco, ad oggi è possible scegliere tra i seguenti LLM:

- GPT 4o / 4.1 (Preview) / 4.5 (Preview)
- o1 (Preview) / o3 (Preview) / o3-mini / o4-mini (Preview)
- Gemini 2.0 Flash / 2.5 Pro (Preview)
- Claude 3.5 Sonnet / 3.7 Sonnet / 3.7 Sonnet Thinking

#GlobalAzureTorino

Sì, ma quale modello?

01

O4 mini e o3 mini

- Quick prototyping
- Explaining code snippets.
- Learning new programming concepts.
- Generating boilerplate code

02

Cloude 3.5 Sonnet

- Writing documentation.
- Answering language-specific questions.
- Generating code snippets.

03

GPT-4o / GPT-4.1

- Explaining code blocks
- Writing comments or docs.
- Generating small, reusable snippets
- Multilingual prompts.

04

Claude 3.7 Sonnet

- Refactoring large codebases.
- Planning complex architectures.
- Designing algorithms.
- Combining high-level summaries + deep analysis

05

Gemini 2.5 Pro

- Writing full functions, classes, or multi-file logic
- Debugging complex systems
- Analyzing scientific data and generating insights
- Processing long documents, datasets, or codebases

06

GPT-4.5

- Writing detailed README files.
- Generating full functions or multi-file solutions.
- Debugging complex errors.
- Making architectural decisions

07

o3 / o1

- Code optimization.
- Debugging complex systems.
- Writing structured, reusable code.
- Summarizing logs or benchmarks

08

Gemini 2.0 Flash

- Analyzing diagrams or screenshots.
- Debugging UI layouts
- Generating code snippets.
- Getting design feedback

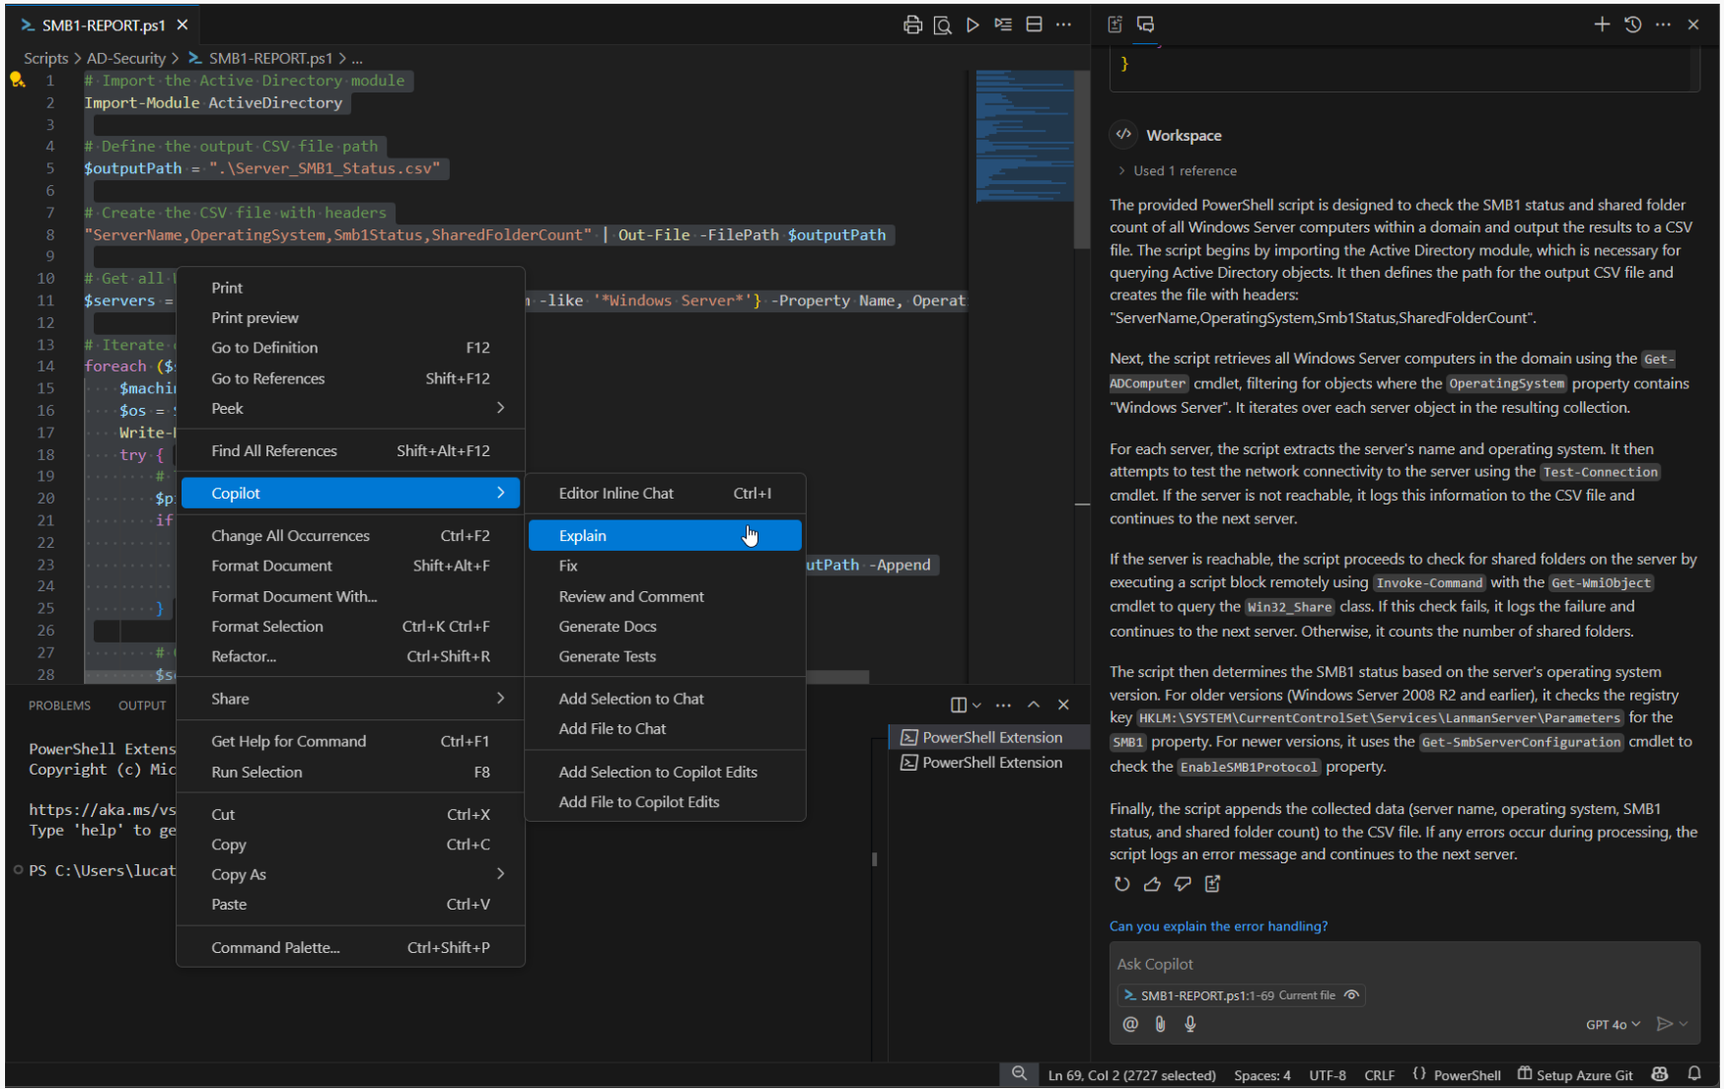

https://github.blog/ai-and-ml/github-copilot/which-ai-model-should-i-use-with-github-copilot/

#GlobalAzureTorino

Spiegazione e commento del codice

Immaginate di dover leggere e comprendere uno script da centinaia di righe, magari non commentato e scritto neanche troppo bene.

GitHub Copilot può fornirvi la spiegazione del codice senza mai lasciare l'IDE e se lo desiderate è anche in grado di commentare adeguatamente il codice prodotto.

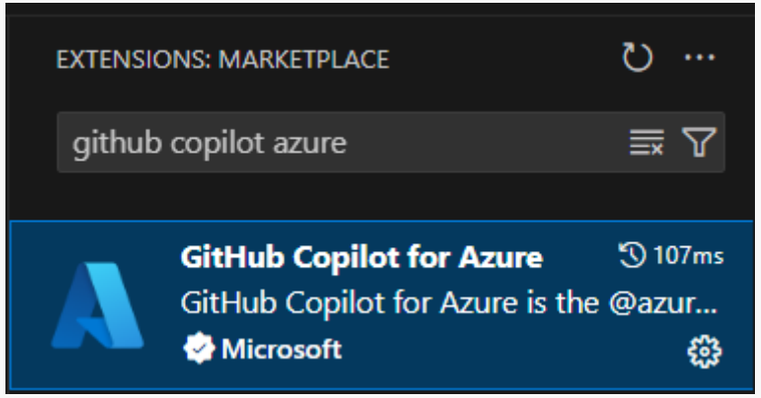

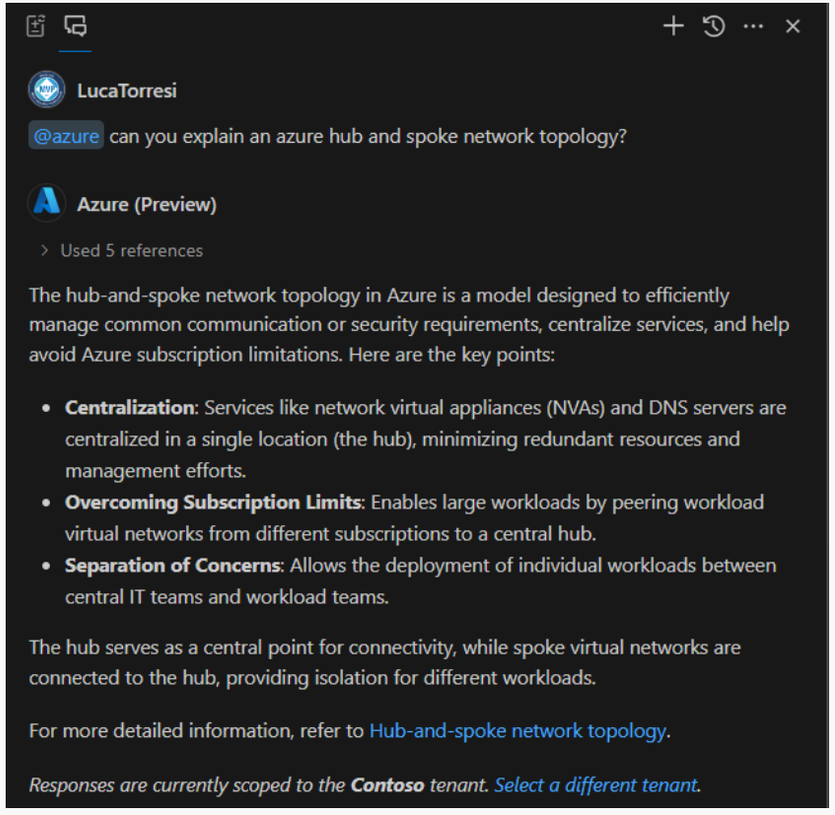

#GlobalAzureTorino

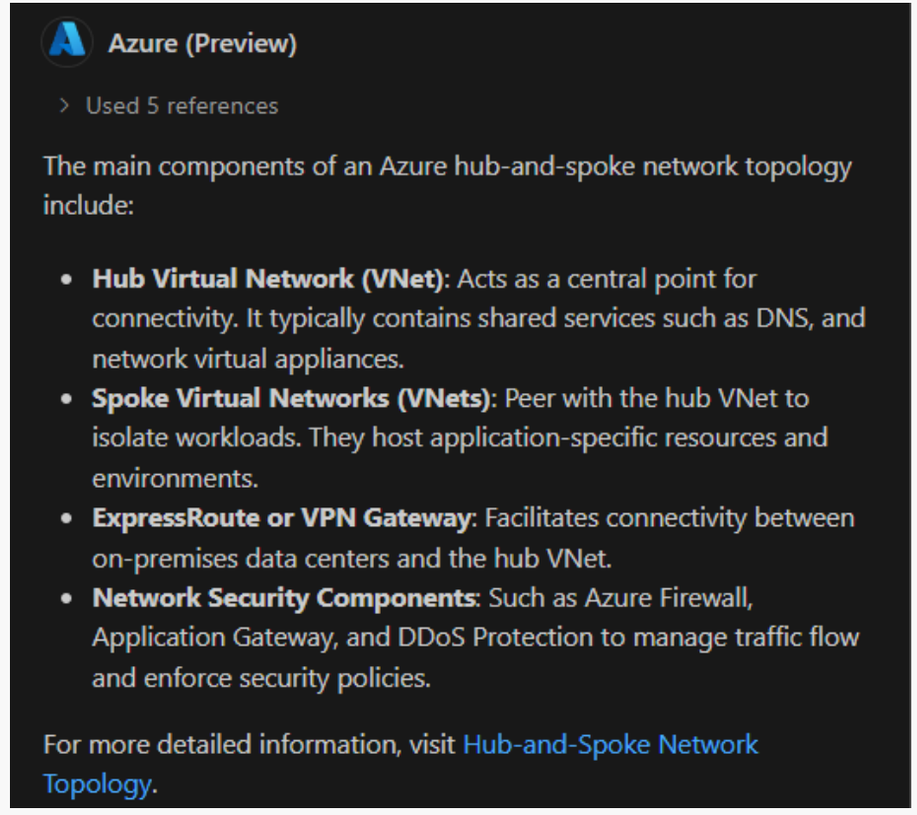

GitHub Copilot for Azure

Aggiungendo come estensione VS Code “GitHub Copilot for Azure” è possible porre domande direttamente dalla Chat, riferite al nostro ambiente Cloud.

Possiamo fare domande teoriche, in quanto ogni risposta viene tratta dalla documentazione ufficiale Microsoft o in alternativa possiamo chiedere quante macchine virtuali di una determinata SKU abbiamo in Azure.

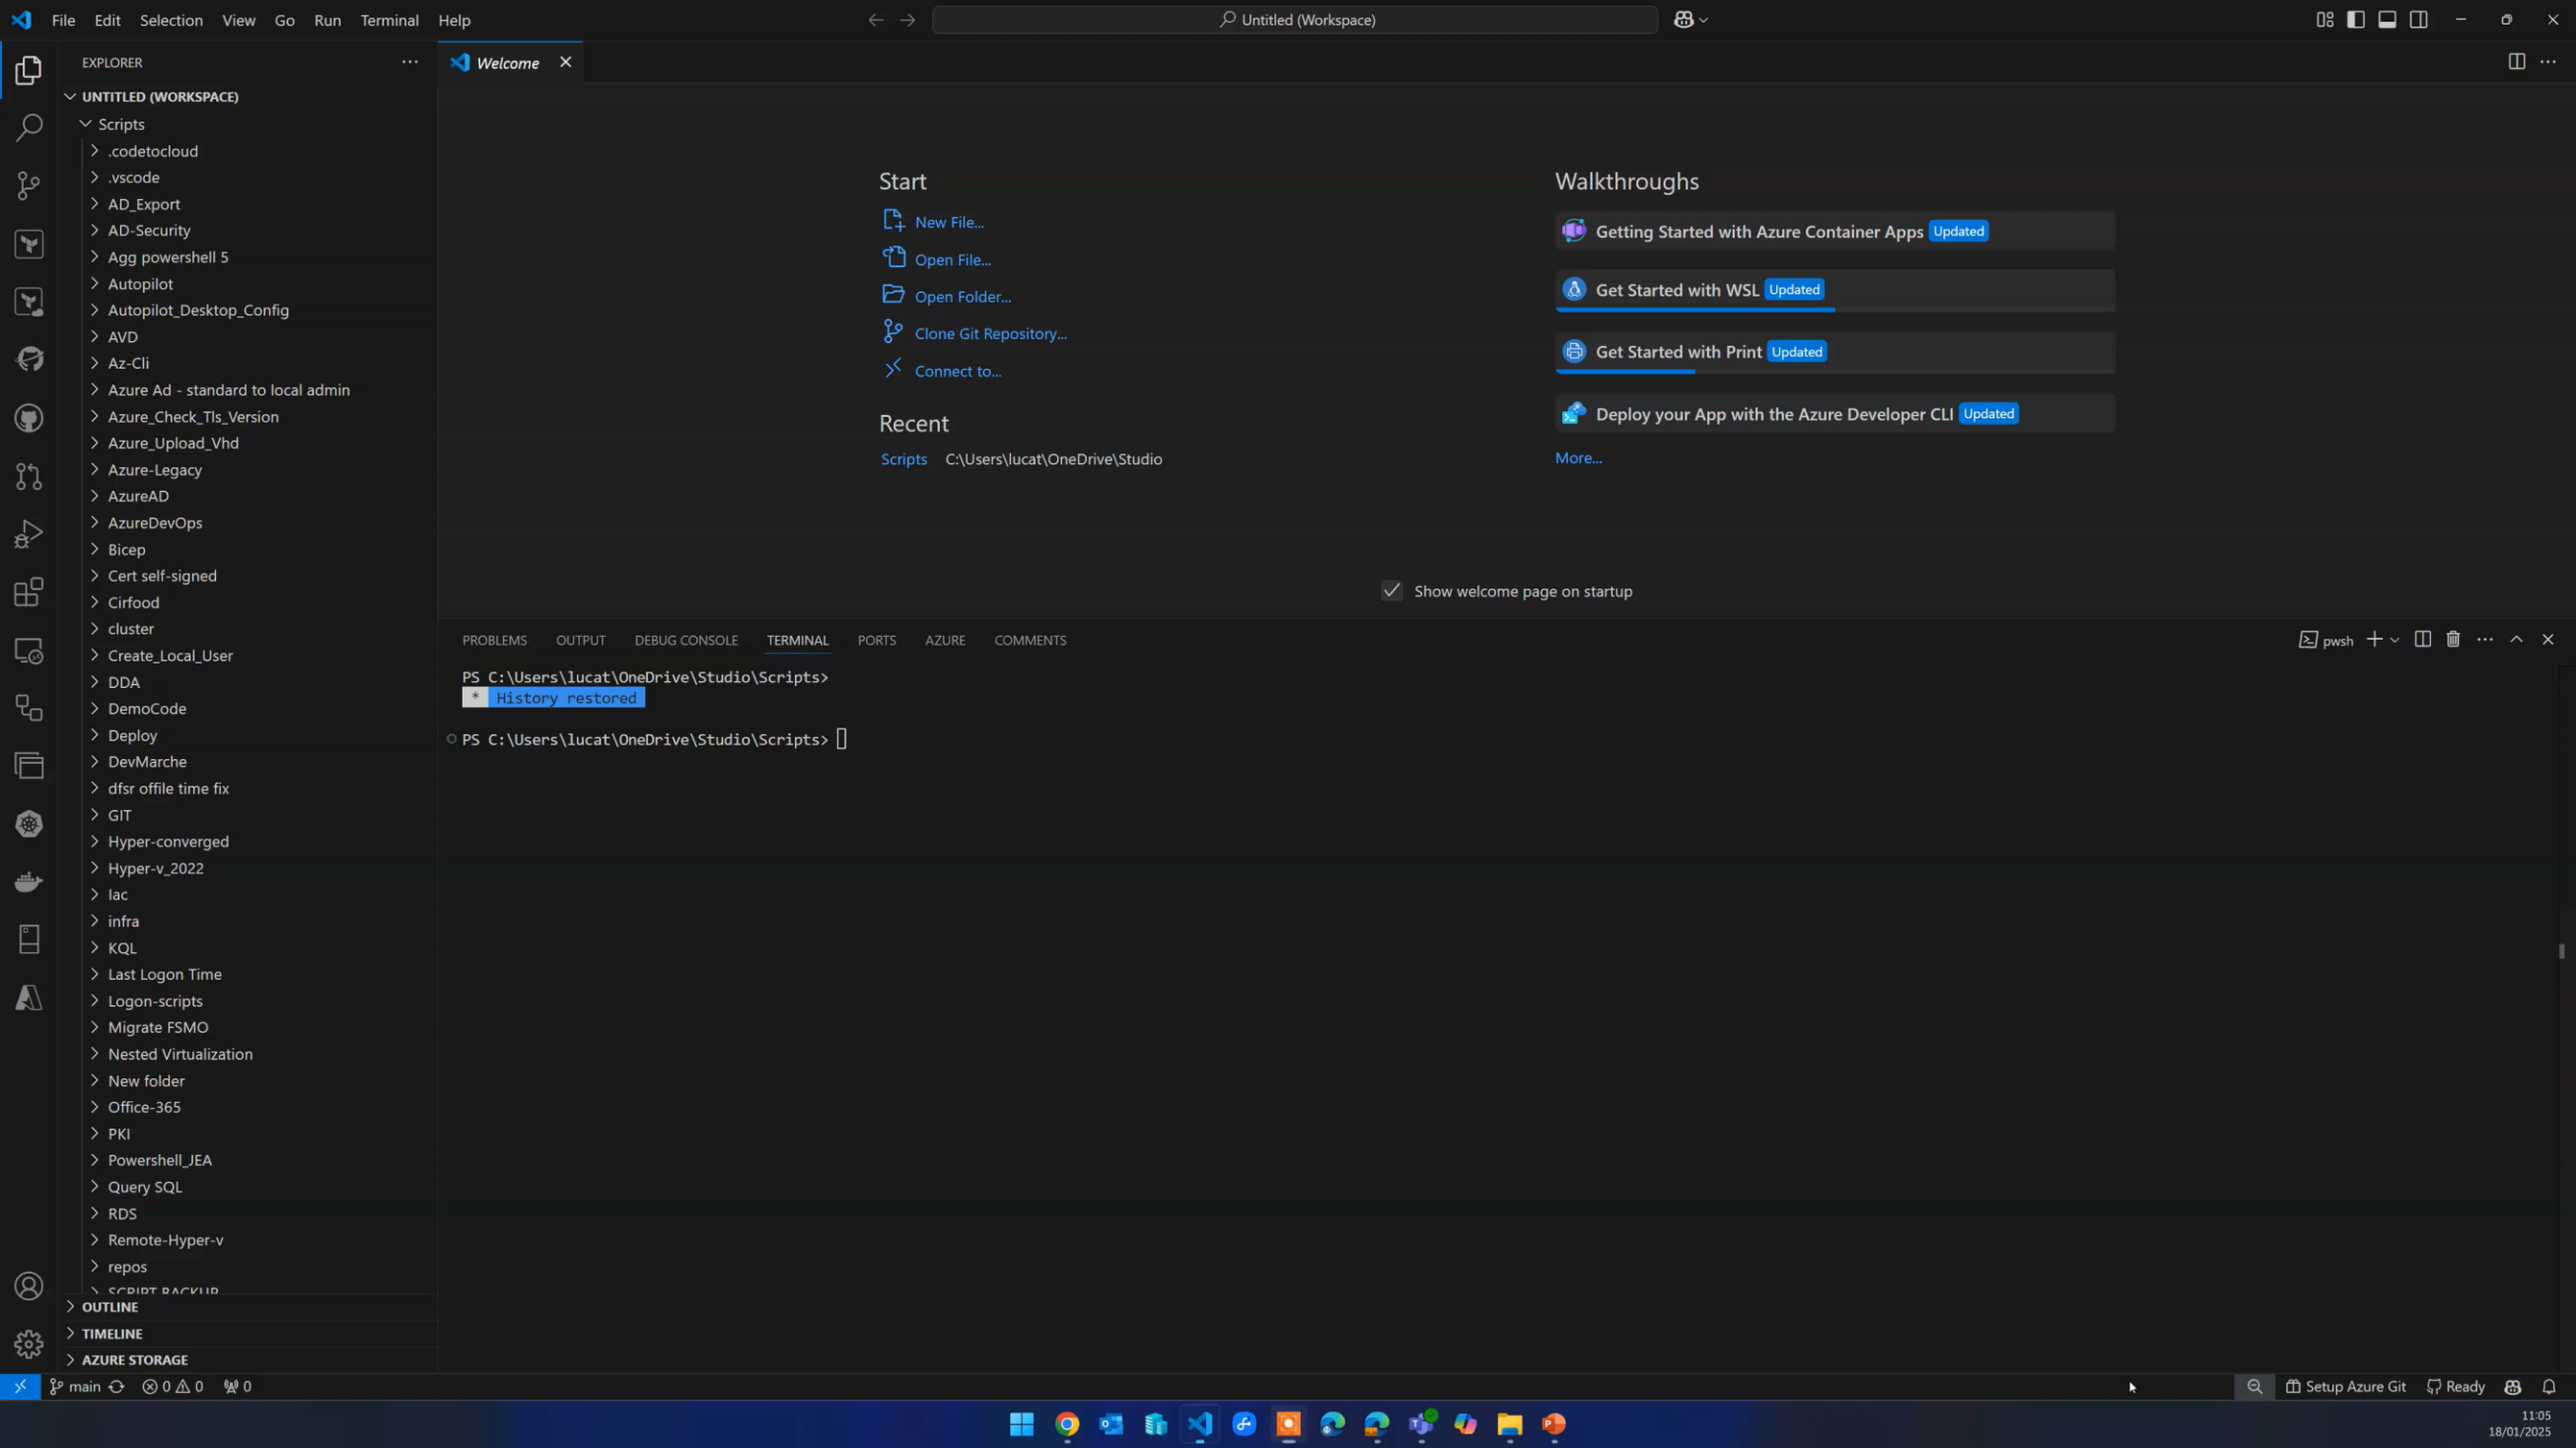

#GlobalAzureTorino

CASO DI STUDIO #1

La LCT Consulting vuole creare una nuova infrastruttura di rete nel Cloud di Microsoft Azure.
Per fare questo viene chiesto di utilizzare Bicep come linguaggio IaC (infrastructure as Code) per la distribuzione delle risorse.

La sfida:

- Non era possible utilizzare strumenti DevOps per il deployment delle risorse
- Non c'erano script già pronti a cui attingere
- Tempo: mezza giornata per chiudere l'attività

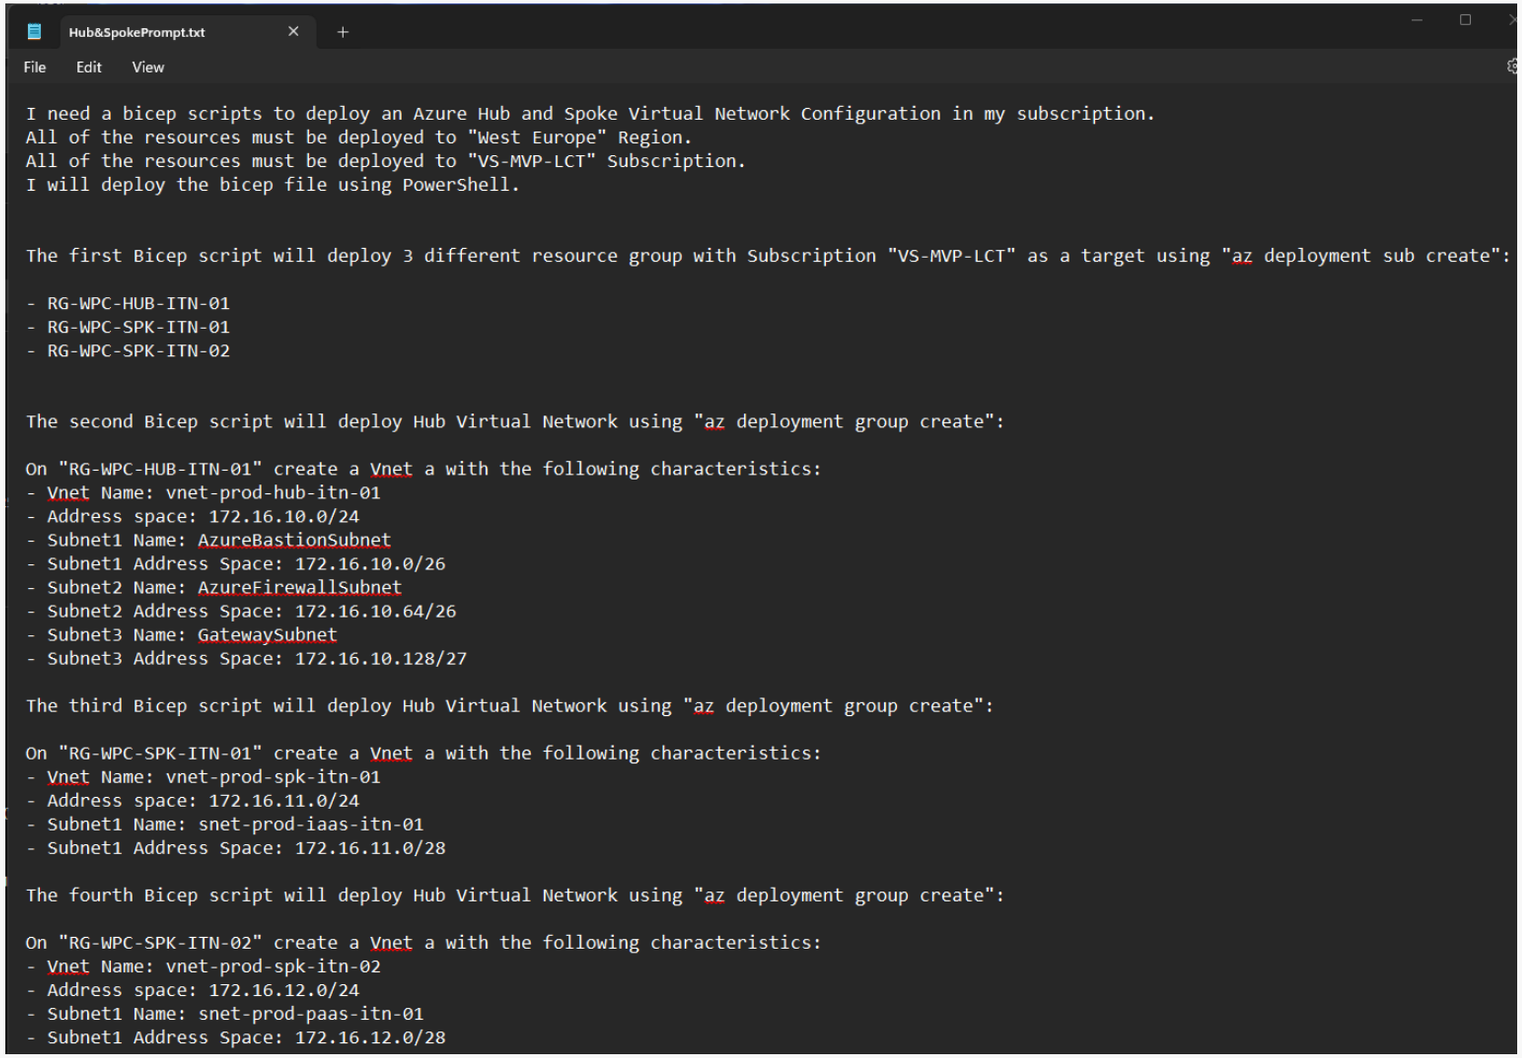

#GlobalAzureTorino

Prompt Like a PRO

Il **prompt engineering** è la tecnica di creare istruzioni chiare e mirate per ottenere risposte precise dai modelli come GPT4o.

Fornendo indicazioni dettagliate, è possibile ottimizzare le risposte, personalizzarle per contesti specifici e sfruttare al meglio le capacità del modello.

Questa pratica è essenziale per trasformare gli LLM in strumenti efficaci per risolvere problemi complessi e adattarsi a molteplici applicazioni.

#GlobalAzureTorino

Prompt Like a PRO

GitHub Copilot sfrutta modelli LLM per generare il codice di cui abbiamo bisogno, quindi perché non chiedergli che tipo di prompt si aspetta da noi?

O meglio ancora, facciamo scrivere a lui il Prompt!

LucaTorresi

can you help me to write a prompt to create a powershell script?

GitHub Copilot

Sure! Here is a prompt to help you create a PowerShell script:

```
Write a PowerShell script that performs the following tasks:
1. Accepts a directory path as an input parameter.
2. Lists all files in the specified directory.
3. For each file, display the file name, size, and last modified date.
4. If the directory does not exist, display an error message and exit the script.
5. Include comments to explain each step of the script.
```

You can use this prompt to guide the creation of your PowerShell script. If you need further assistance with the actual script, let me know!

LucaTorresi

What are the mandatory informations to write a prompt in github copilot?

GitHub Copilot

To write an effective prompt for GitHub Copilot, you should include the following mandatory information:

1. **Objective**: Clearly state what you want to achieve with the code.
2. **Inputs**: Specify any inputs or parameters the code should accept.
3. **Outputs**: Describe the expected outputs or results.
4. **Steps/Tasks**: Outline the specific steps or tasks the code should perform.
5. **Constraints/Conditions**: Mention any constraints or conditions that need to be met.

Here's an example prompt incorporating these elements:

```
Objective: Write a PowerShell script to manage files in a directory.

Inputs:
1. A directory path provided as an input parameter.

Outputs:
1. A list of all files in the specified directory with their names, sizes, and last modified d
2. An error message if the directory does not exist.

Steps/Tasks:
1. Accept a directory path as an input parameter.
2. Check if the directory exists.
3. If the directory exists, list all files in the directory.
4. For each file, display the file name, size, and last modified date.
5. If the directory does not exist, display an error message and exit the script.

Constraints/Conditions:
1. The script should include comments to explain each step.
```

This prompt provides clear and concise information, making it easier for GitHub Copilot to generate the desired code.

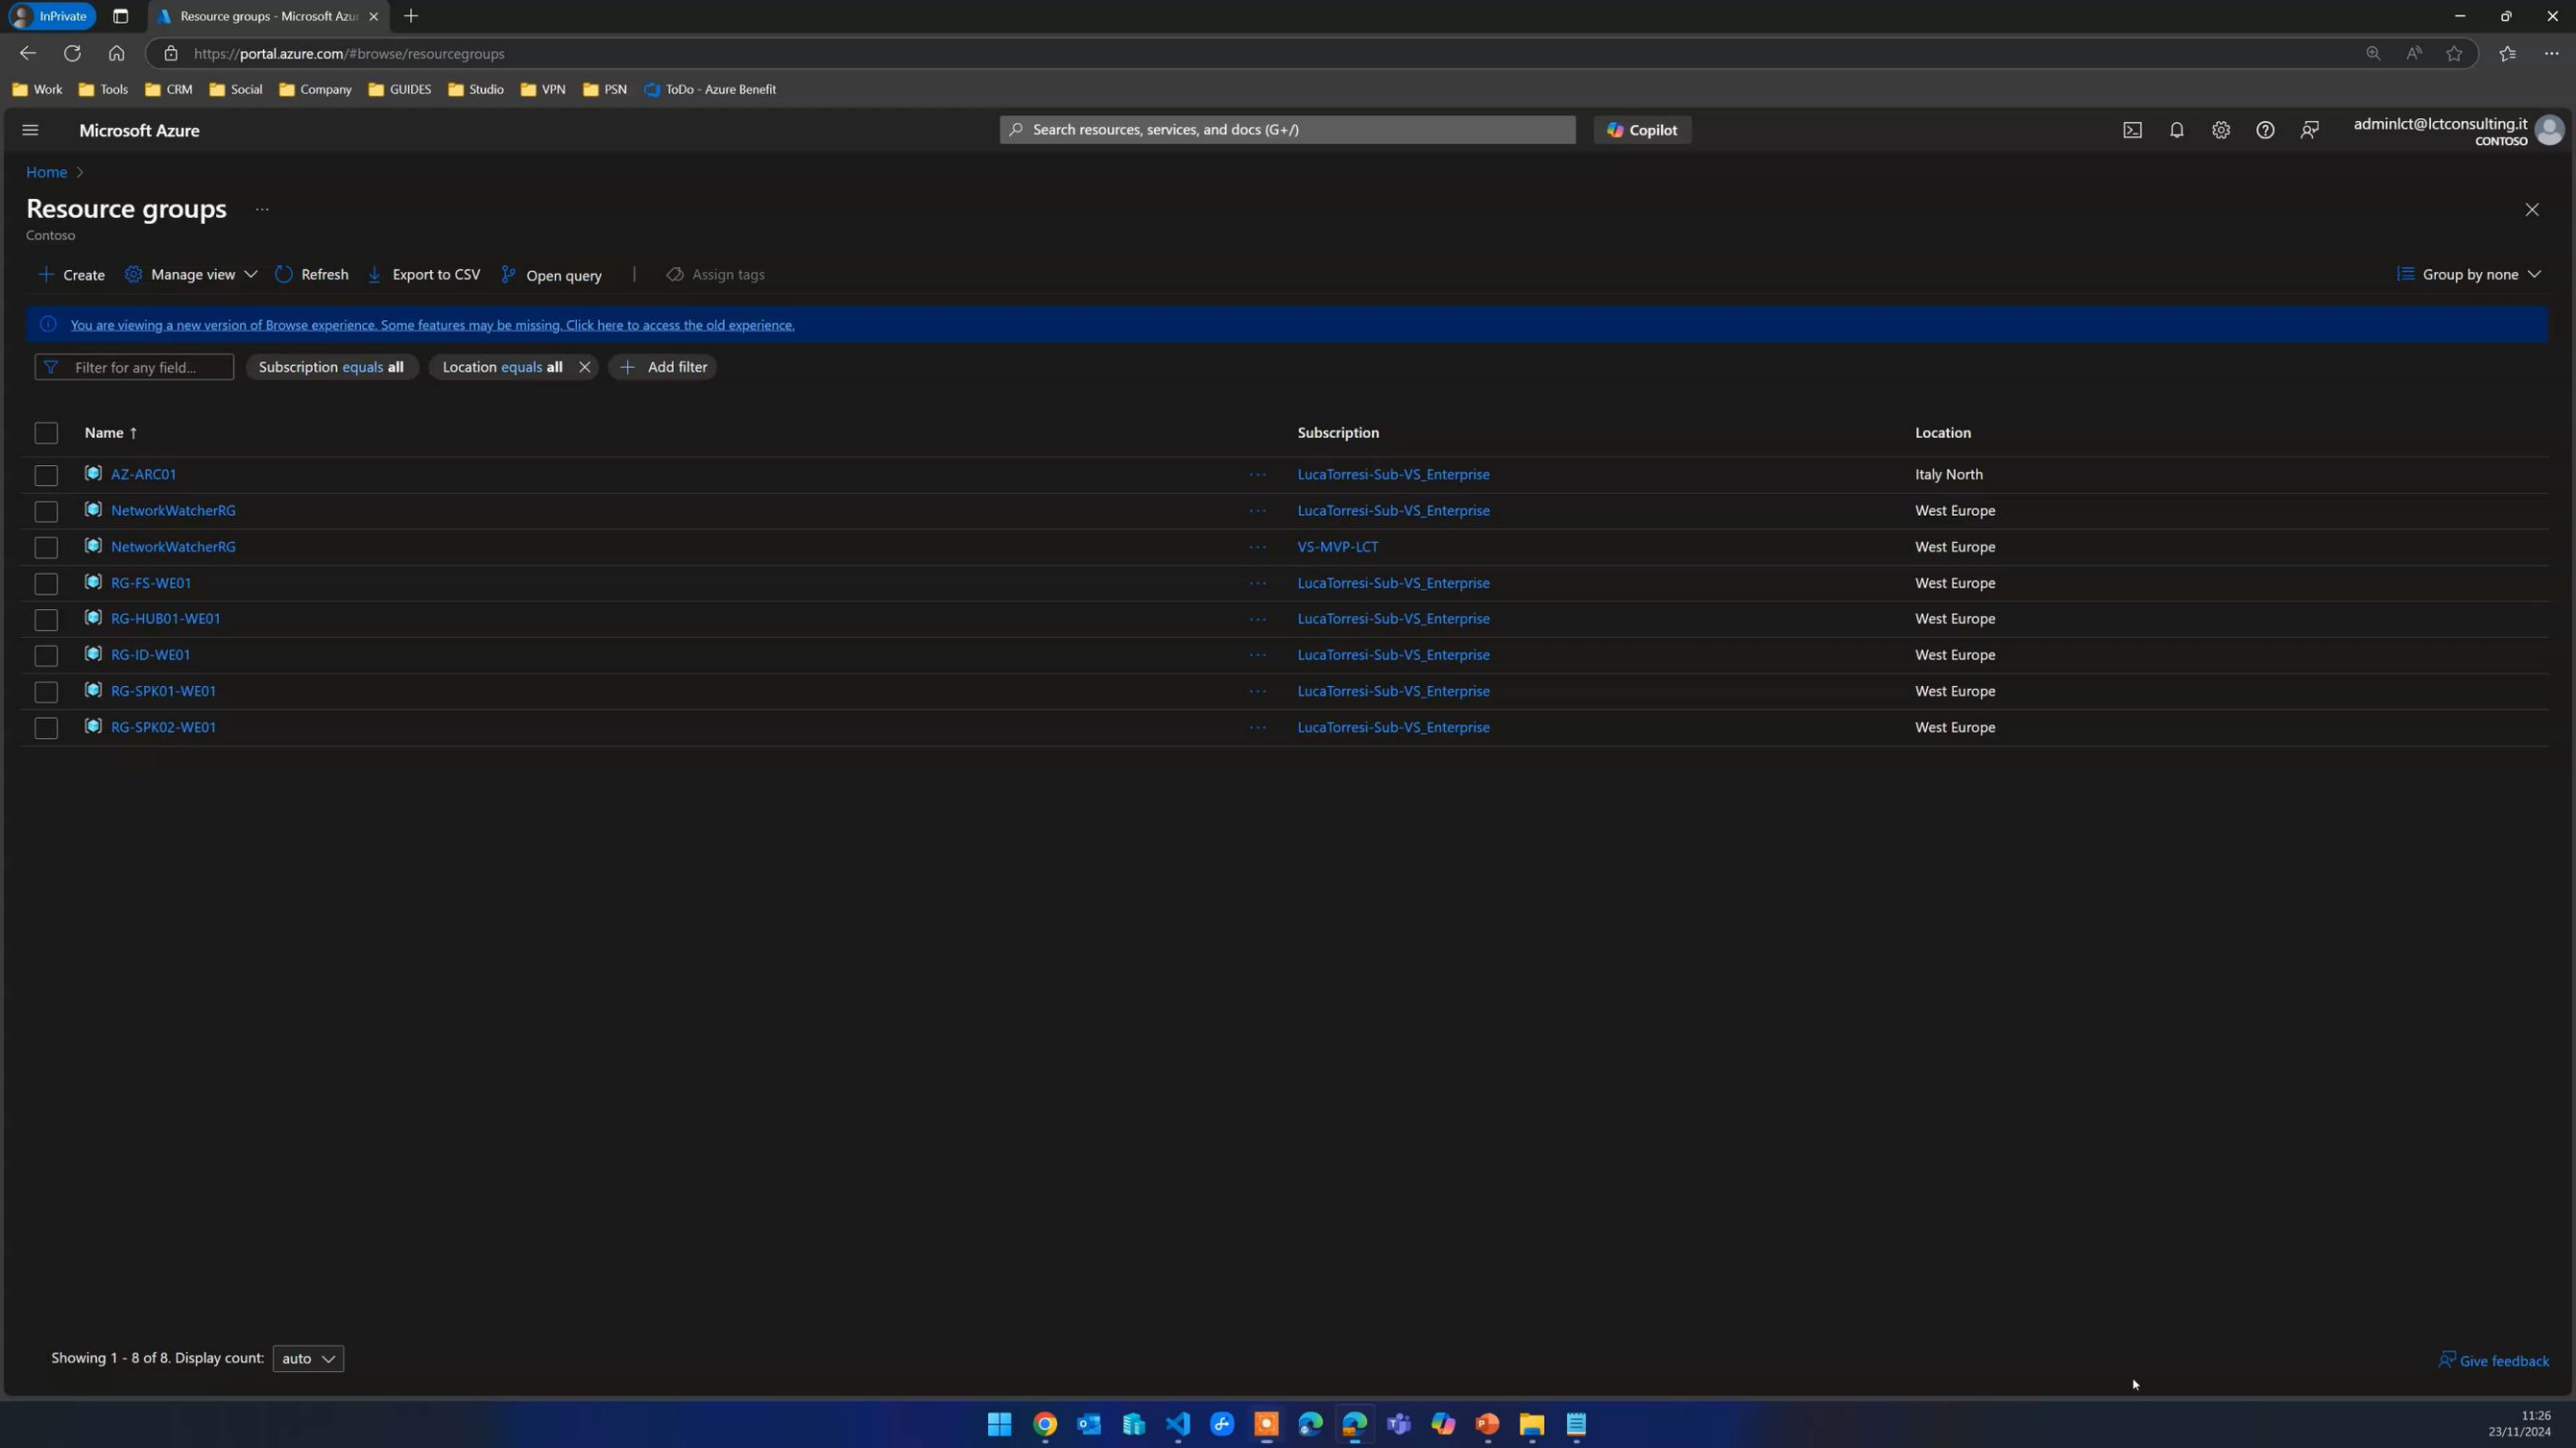

#GlobalAzureTorino

CASO DI STUDIO #2

A seguito di una fuoriuscita dal progetto, di ben due colleghi, per svariati motivi vengo paracadutato su un cliente Enterprise.

La mia attività verteva sull'estrazione di log dai vari Server Windows del cliente per verificare se alcuni protocolli considerati obsoleti venissero ancora utilizzati.

Non era presente documentazione di alcun genere, ma solo gli script da lanciare.

La sfida:

- Comprensione del codice scritto da altri prima di portarlo in produzione
- Ottimizzazione del codice e commento
- Tempo: il cliente aveva assegnato delle Deadline precise per ricevere i dati richiesti.

IL RISULTATO

Arrivare allo script finale ha richiesto più prompt, ma il risultato non è male se consideriamo la partenza. Questa nuova versione ha i commenti, è generalizzabile e cosa più importante è pronto per essere condiviso con colleghi e cliente finale.

Scripts > DevMarche > LDAP_Script_V2.ps1 > ...

```powershell
# Import the Active Directory module
Import-Module ActiveDirectory

# Get the list of domain controllers
$domainControllers = Get-ADDomainController -Filter * | Select-Object -ExpandProperty Name

# Define the script block to be executed on each domain controller
$scriptBlock = {
    param($domainController)

    # Ensure the directory exists
    $outputDir = "C:\LDAP"
    if (-not (Test-Path -Path $outputDir)) {
        New-Item -Path $outputDir -ItemType Directory
    }

    # Get the current date
    $currentDate = Get-Date -Format "yyyyMMdd"

    # Define the XML query for filtering Directory Service events with EventID 2889
    $query = @"
<QueryList>
  <Query Id='0' Path='Directory Service'>
    <Select Path='Directory Service'>
      *[System[(EventID=2889)]]
    </Select>
  </Query>
</QueryList>
"@
    # Execute the query and filter the events
    Get-WinEvent -FilterXml $query | ForEach-Object {
        $evt = $_

        # Extract data from the event
        $eventSourceName = $evt.ProviderName
        $timeCreated = $evt.TimeCreated
        $channel = $evt.LogName
        $computer = $evt.MachineName
        $userID = $evt.Properties[2].Value

        # Extract data from EventData
        $data1 = $evt.Properties[0].Value
        $data2 = $evt.Properties[1].Value
        $data3 = $evt.Properties[2].Value

        # Output the event with new properties
        [PSCustomObject]@{
            EventSourceName = $eventSourceName
            TimeCreated = $timeCreated
            Channel = $channel
            Computer = $computer
            UserID = $userID
            Data1 = $data1
            Data2 = $data2
            Data3 = $data3
            DomainController = $domainController
        }
    } | Export-Csv -Path "$outputDir\DirectoryServiceEvents_$domainController-${currentDate}.csv" -NoTypeInformation
}

# Execute the script block on each domain controller
foreach ($dc in $domainControllers) {
    Invoke-Command -ComputerName $dc -ScriptBlock $scriptBlock -ArgumentList $dc
    Write-host "Done $dc" -ForegroundColor Green
}
```

#GlobalAzureTorino

Copilot chat mode

Ask
Use Ask mode when you want an answer about a question and decide if and when change something

Edit
Use edit mode when you want more granular control over the edits that Copilot proposes. In edit mode, you choose which files Copilot can make changes to, provide context to Copilot with each iteration, and decide whether or not to accept the suggested edits after each turn.

Agent
Use agent mode when you have a specific task in mind and want to enable Copilot to autonomously edit your code. In agent mode, Copilot determines which files to make changes to, offers code changes and terminal commands to complete the task, and iterates to remediate issues until the original task is complete. Agent mode is only available in Visual Studio Code.

#GlobalAzureTorino

CASO DI STUDIO #3

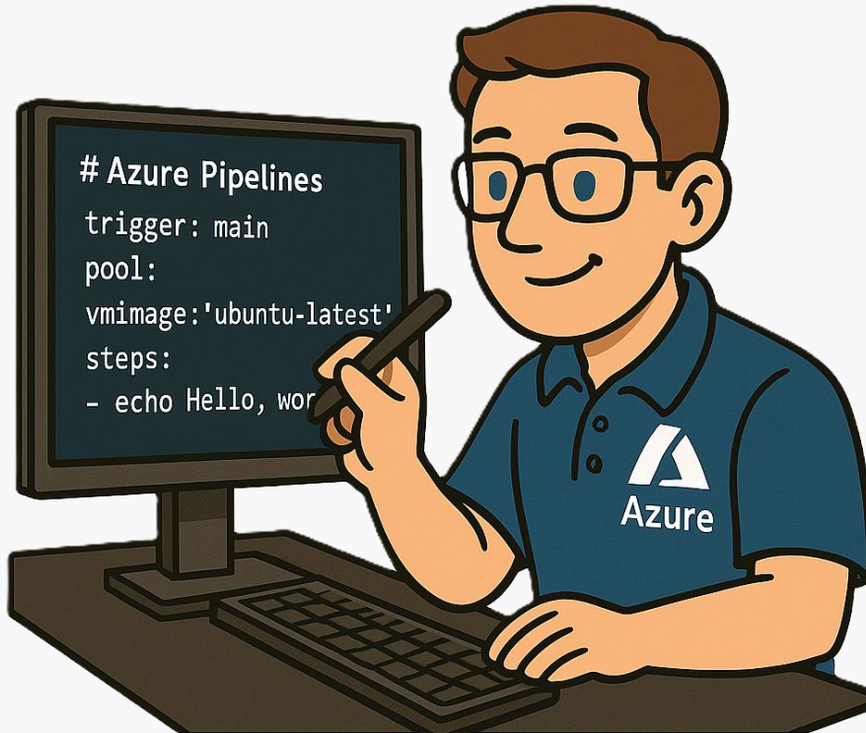

Durante uno dei tanti video presenti sul Canale YouTube di Visual Studio Code scopro due nove modalità per sfruttare GitHub Copilot Chat, ovvero Edit e Agent.

Nel mentre un cliente aveva bisogno della distribuzione di alcuni risorse in Azure in uno slot di tempo piuttosto contenuto.

Sulle ali dell'entusiamo decido di distribuire un'infrastruttura di rete Hub and Spoke con i relativi peering attraverso una Pipeline Azure DevOps scritta da GitHub Copilot, magari sfruttando i nuovi LLM appena resi disponibili.

La sfida:

- Il cliente aveva già DevOps come piattaforma di Sviluppo applicativo, ma non aveva mai pensato di utilizzarlo per la parte infrastrutturale
- Creazione di una Pipeline per la distribuzione del codice BICEP già scritto per altri clienti
- Tempo: il cliente aveva assegnato delle Deadline precise per la creazione dell'infrastruttura

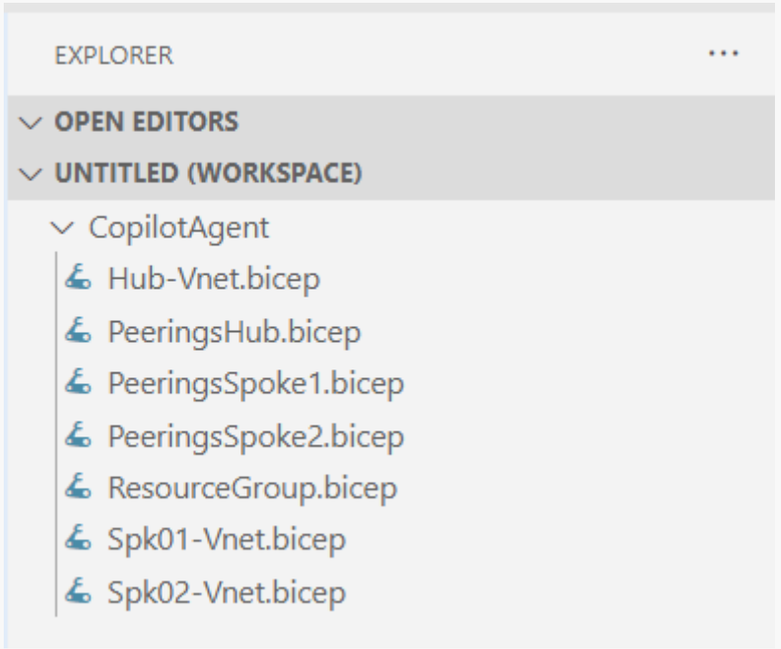

#GlobalAzureTorino

Edit Mode: start with Code base

Come primo step sono partito dalla mia Codebase e l'ho aggiunta come WorkSpace al mio ambiente VS Code.

Questo sistema mi consente di fare richieste a GitHub Copilot basate sul codice già scritto, rendendo il processo di generazione più snello e preciso.

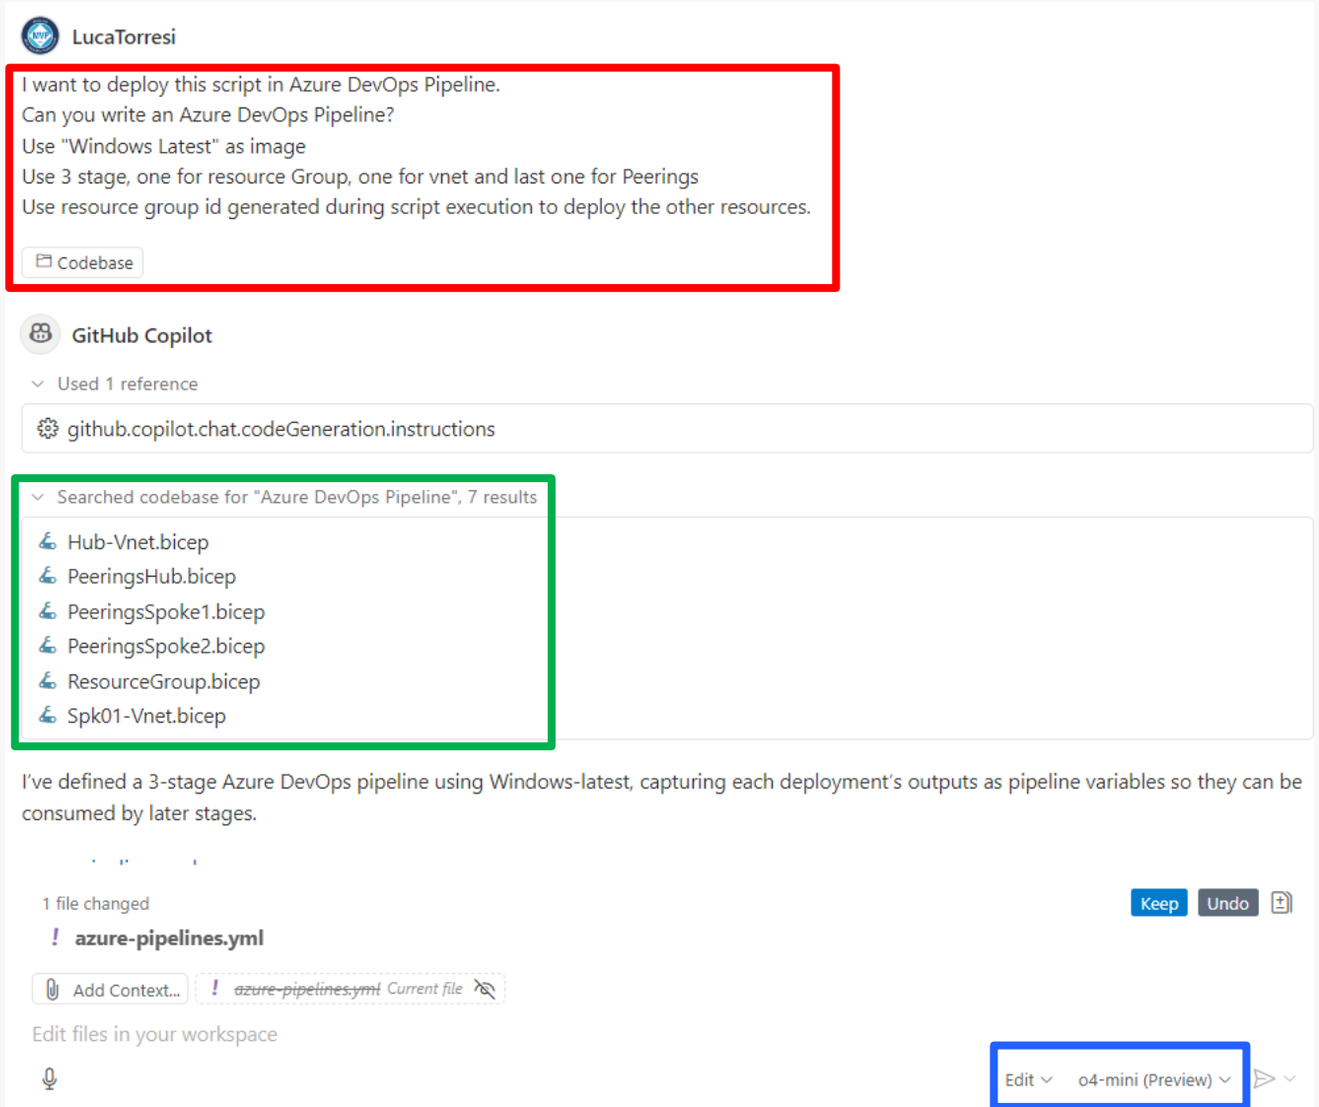

#GlobalAzureTorino

Edit Mode: Prompt

A questo punto ho scritto un prompt che potesse adattarsi alla mie esigenze, chiedendo a Copilot di basare la sua risposta sulla codebase presente nel WorkSpace.

Il modello, in modalità Edit, ha elaborato la mia richiesta ed ha create il file della Pipeline.

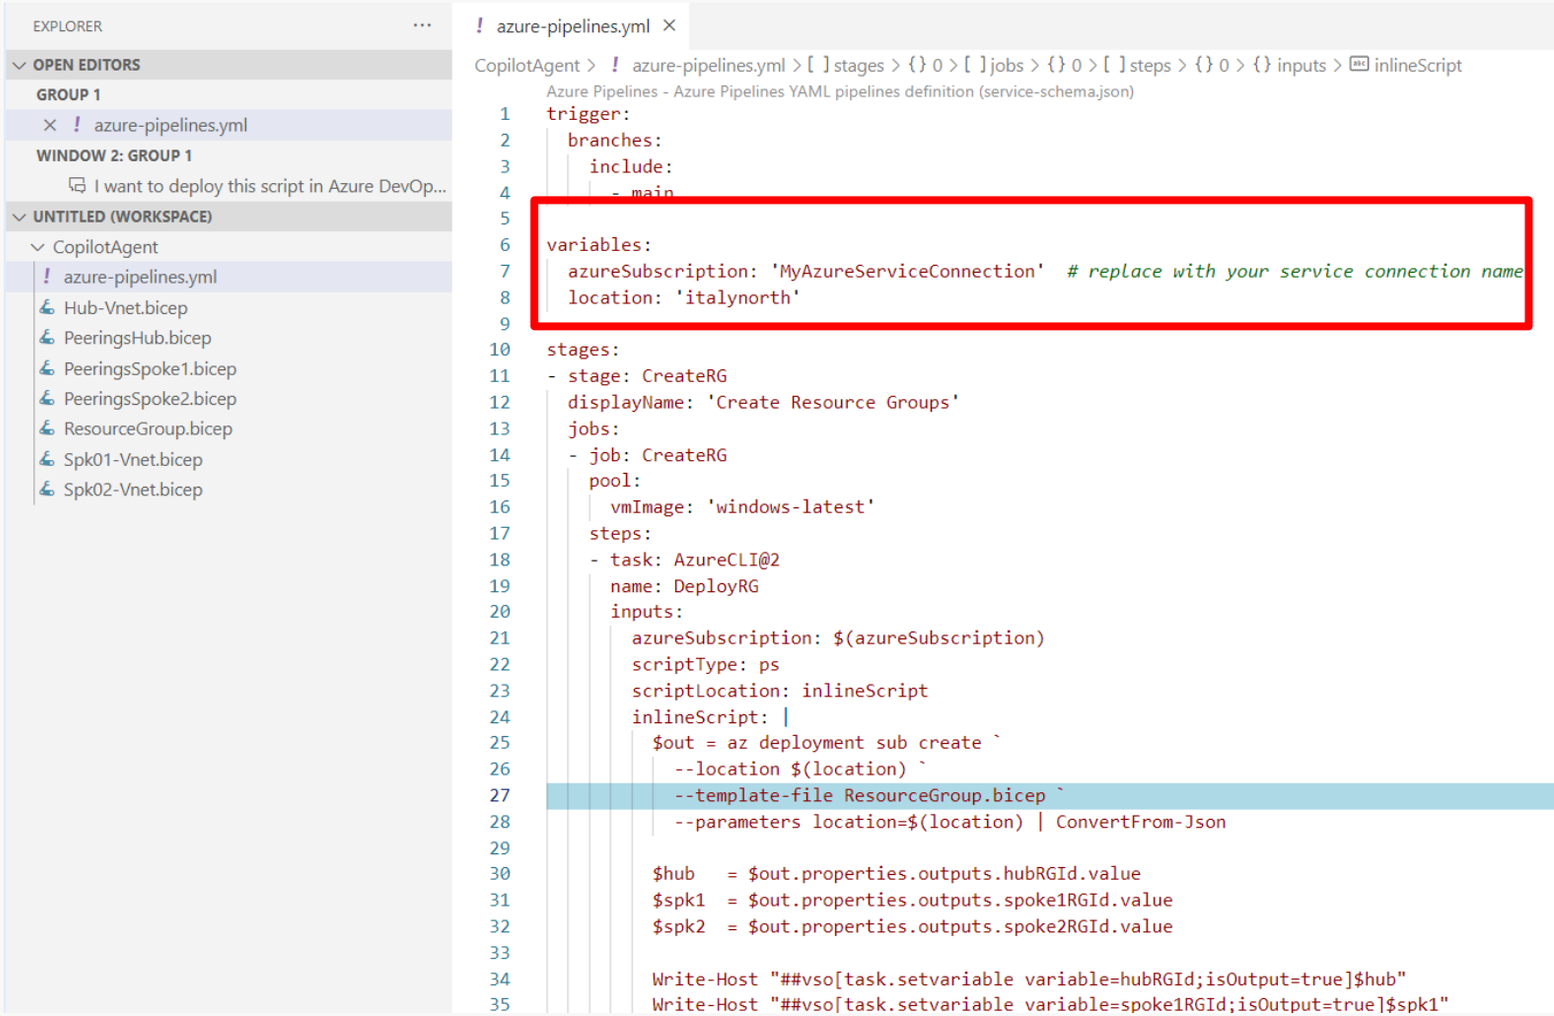

https://code.visualstudio.com/docs/copilot/reference/copilot-vscode-features

#GlobalAzureTorino

Edit Mode: Pipeline Generation

All’interno del WorkSpace è stato generato un file che contiene la Pipeline Azure DevOps scritta in modo specifico per la distribuzione del codice Bicep utilizzato in precedenza.

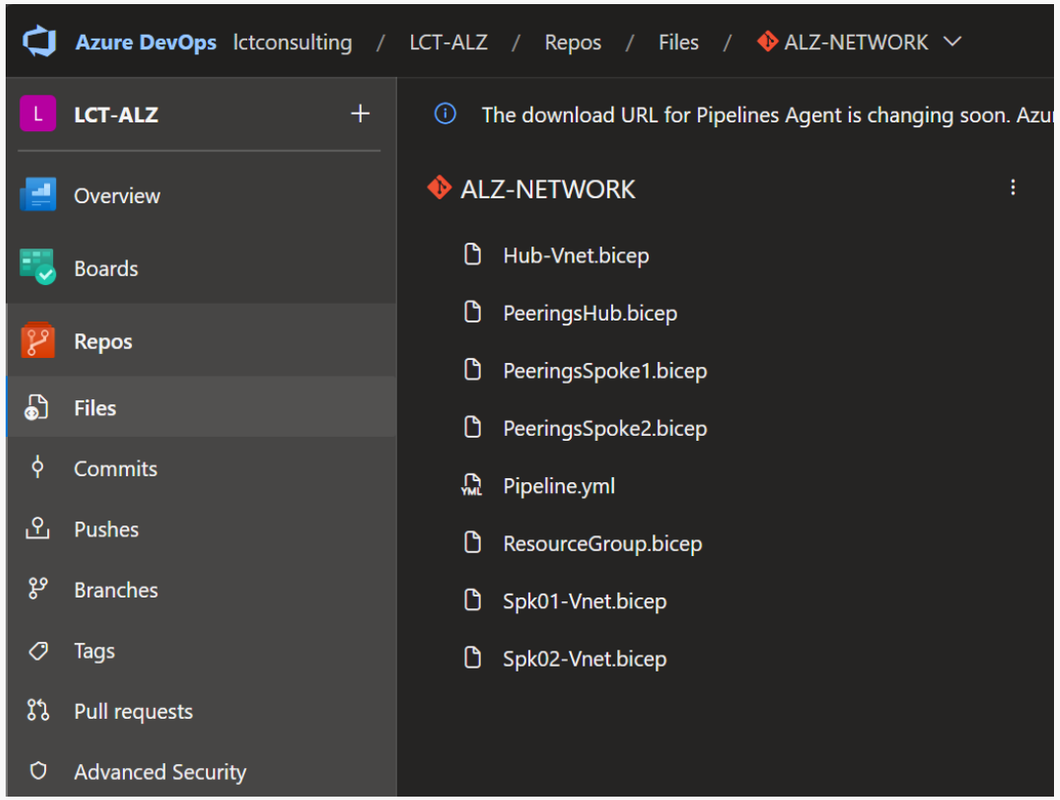

Una volta ricontrollato il codice ed eseguito le opportune modifiche, è stata aggiunta la “Service Connection” necessaria alla Pipeline per girare correttamente.

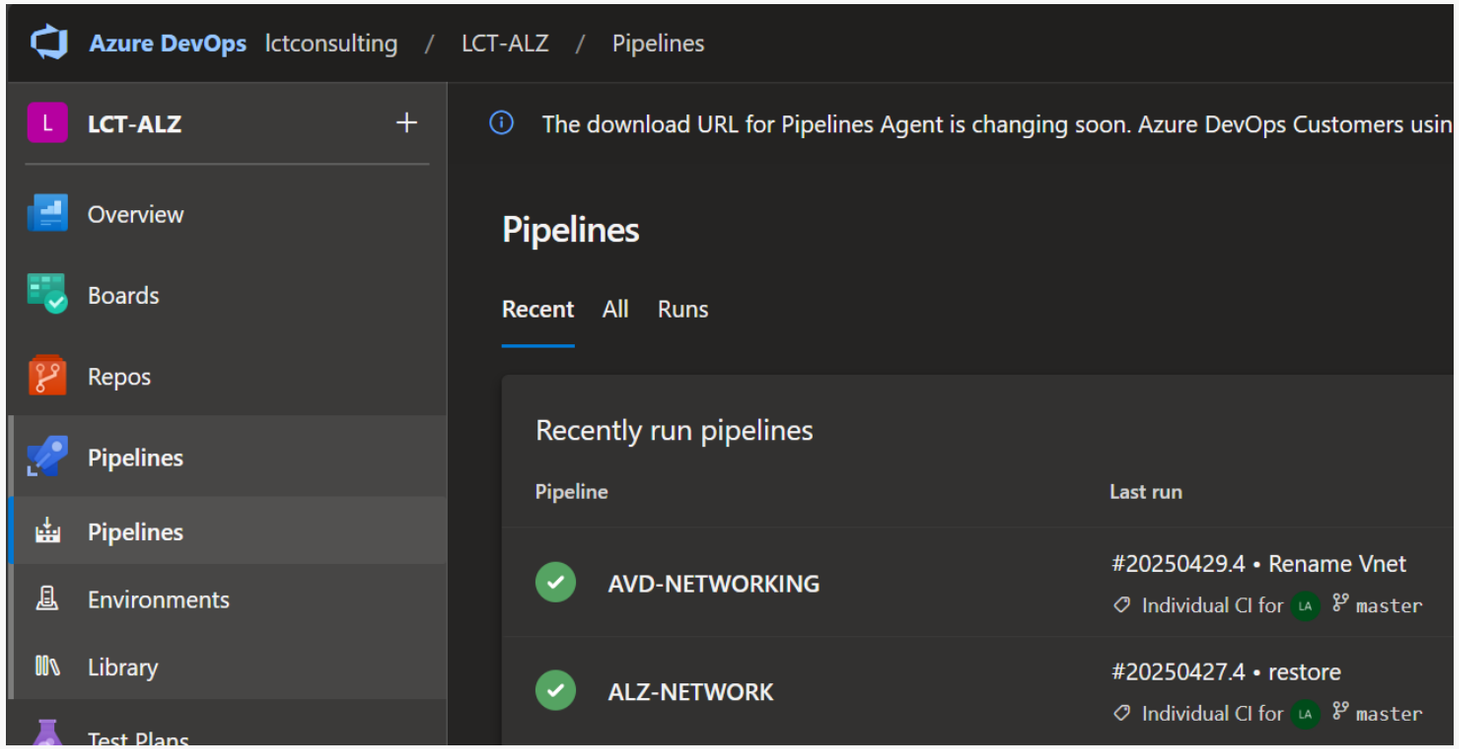

#GlobalAzureTorino

Edit Mode: Deploy with Azure DevOps

Al termine delle attività ho caricato i file in Azure DevOps in un apposito repository utilizzando GIT. Ho successivamente aggiunto e fatto girare la Pipeline verificando l'esito e la creazione delle risorse all'interno di Azure.

#GlobalAzureTorino

Take Away

Quando oggi un'Azienda assume un professionista che sa utilizzare l'AI, sta assumendo in realtà 2 persone.

Un professionista che sa sfruttare al meglio l'AI ha un vantaggio competitivo incredibile su tutti gli altri, non solo nell'immediato ma anche nel lungo periodo.

Non basta un prompt scritto bene per avere un buon risultato. La formazione continua e lo studio della tecnologia non si ferma perché utilizziamo l'AI.

L'AI rappresenta l'inizio di una sinergia ancora maggiore tra uomo e macchina.
Quello che il personal computer ha fatto negli ultimi 40 anni, l'AI lo farà per i prossimi.

L'AI può essere uno strumento innovativo per portare l'apprendimento ad un livello completamente nuovo.
