CI/CD

compose

INTRO

WHY?

is a CLI that specializes in accelerating the journey from local development to Azure by automating infrastructure provisioning and code deployment through pre-configured, best-practice templates

alveo EXPERTISE V-Valley AvePoint Qumulo TD SYNNEX EXTRA-NET

INTRO

WHY IS FAST?

- hide the infrastructure
- use of templates
- always-the-same workflow

alveo EXPERTISE V-Valley AvePoint Qumulo TD SYNNEX EXTRA-NET

INTRO

...AND YES, ALSO FOR ARCHITECTS

- create their own architectures
- easy environment management
- always-the-same workflow

WORKFLOW

init package provision deploy monitor

alveo EXPERTISE V-Valley AvePoint Qumulo TD SYNNEX EXTRA-NET

INTRO

INIT

- Scaffolds a new project or initializes an existing codebase using azd templates
- Creates the azure.yaml configuration file to map your local services to cloud resources

INTRO

PACKAGE

- Compiles your application source code and prepares the final assets for cloud deployment
- Builds Docker container images or creates deployment zip archives based on your chosen architecture

alveo EXPERTISE V-Valley AvePoint Qumulo TD SYNNEX EXTRA-NET

INTRO

PROVISION

- Executes your Infrastructure as Code templates to define and shape the cloud environment
- Automatically creates and configures all necessary Azure resources, like databases and hosting plans
- Sets up essential security configurations, including managed identities and role-based access control policies

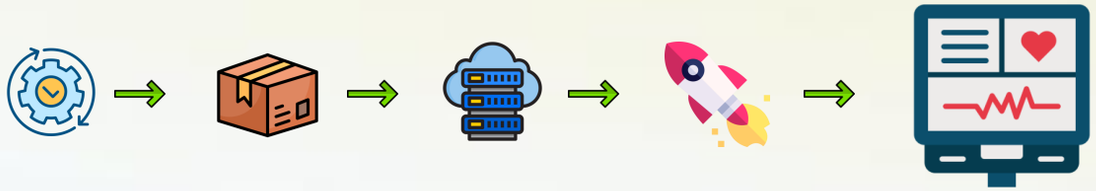

INTRO

DEPLOY

- Pushes the previously packaged code and artifacts directly to your provisioned Azure resources
- Updates your running cloud services, making the latest version of your application live
- Outputs the public endpoint URLs, allowing you to instantly access your live application

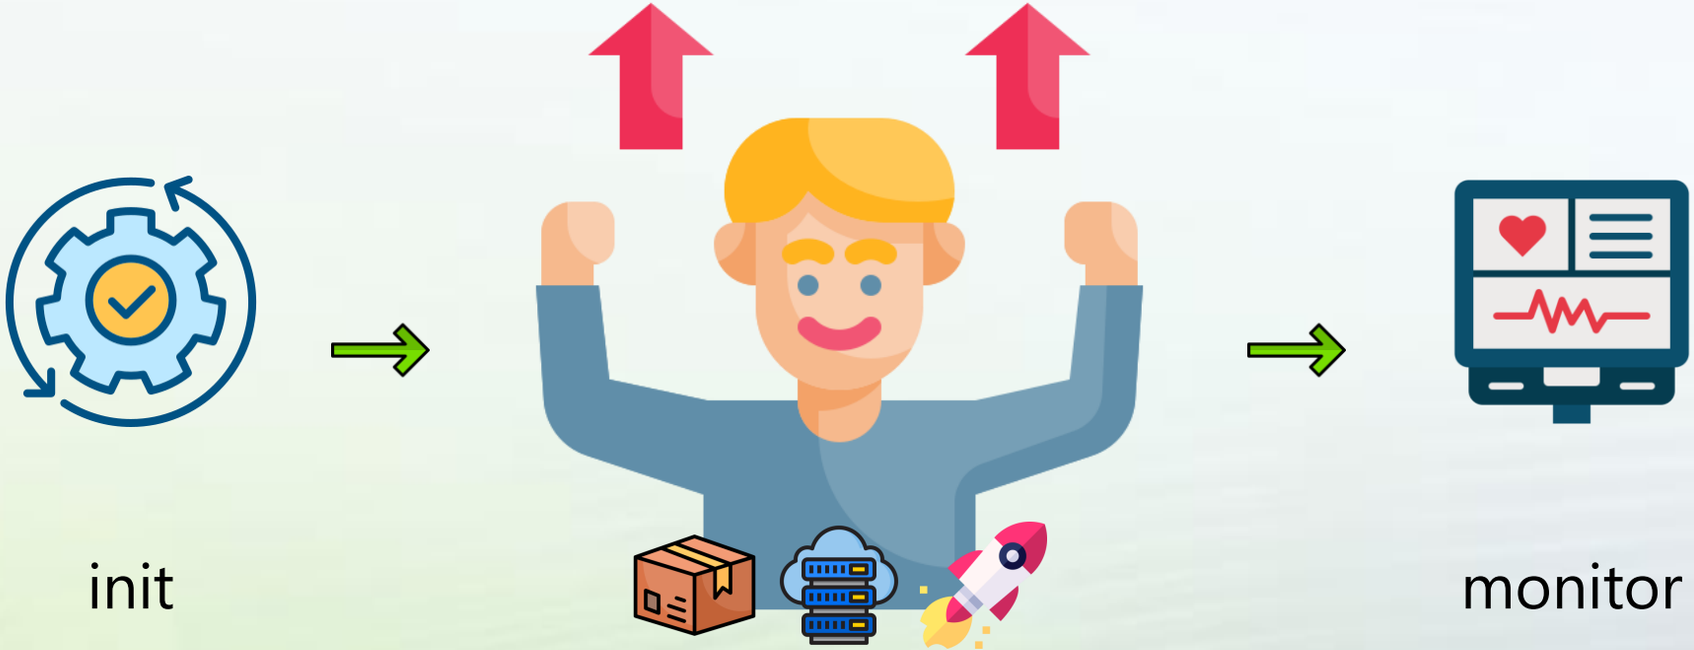

INTRO

MONITOR

- Provides a quick shortcut to open Azure Application Insights or Log Analytics dashboards
- Allows developers to track live application performance, user telemetry, and overall system health
- Helps troubleshoot production issues by providing quick access to error traces and live logs

CONS

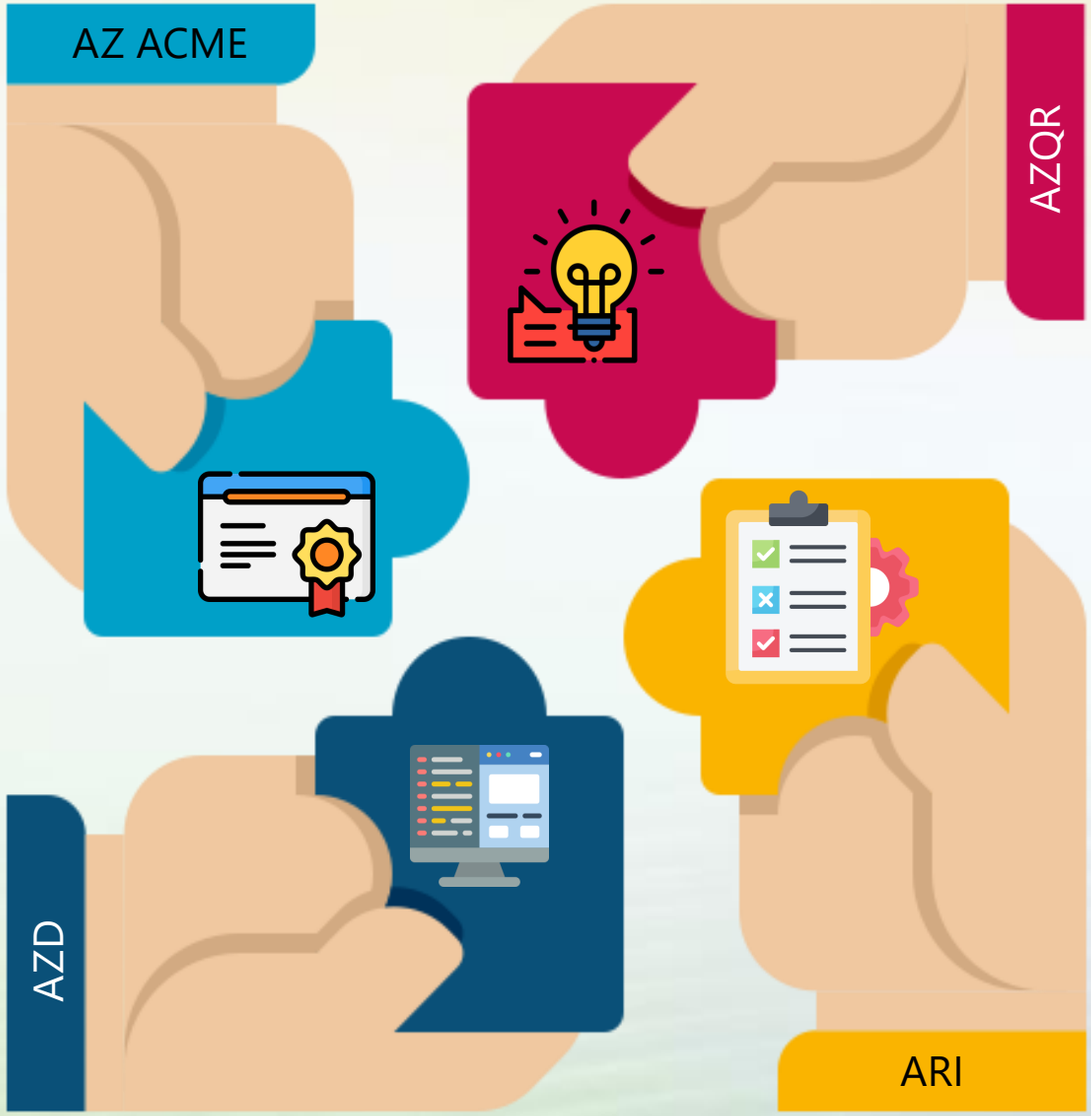

WHAT I DISLIKED

- only a single pipeline
- service connection overwriting
- compose function too basic

alveo EXPERTISE V-Valley AvePoint Qumulo TD SYNNEX EXTRA-NET

...but before

AZQR

ARI

AZ ACME

AZQR

An automated assessment tool that scans Azure environments to ensure compliance with Microsoft's best practices, security, and cost standards

alveo EXPERTISE V-Valley AvePoint Qumulo TD SYNNEX EXTRA-NET

ARI

A powerful PowerShell script designed to generate comprehensive Excel reports detailing every resource within an Azure subscription for auditing

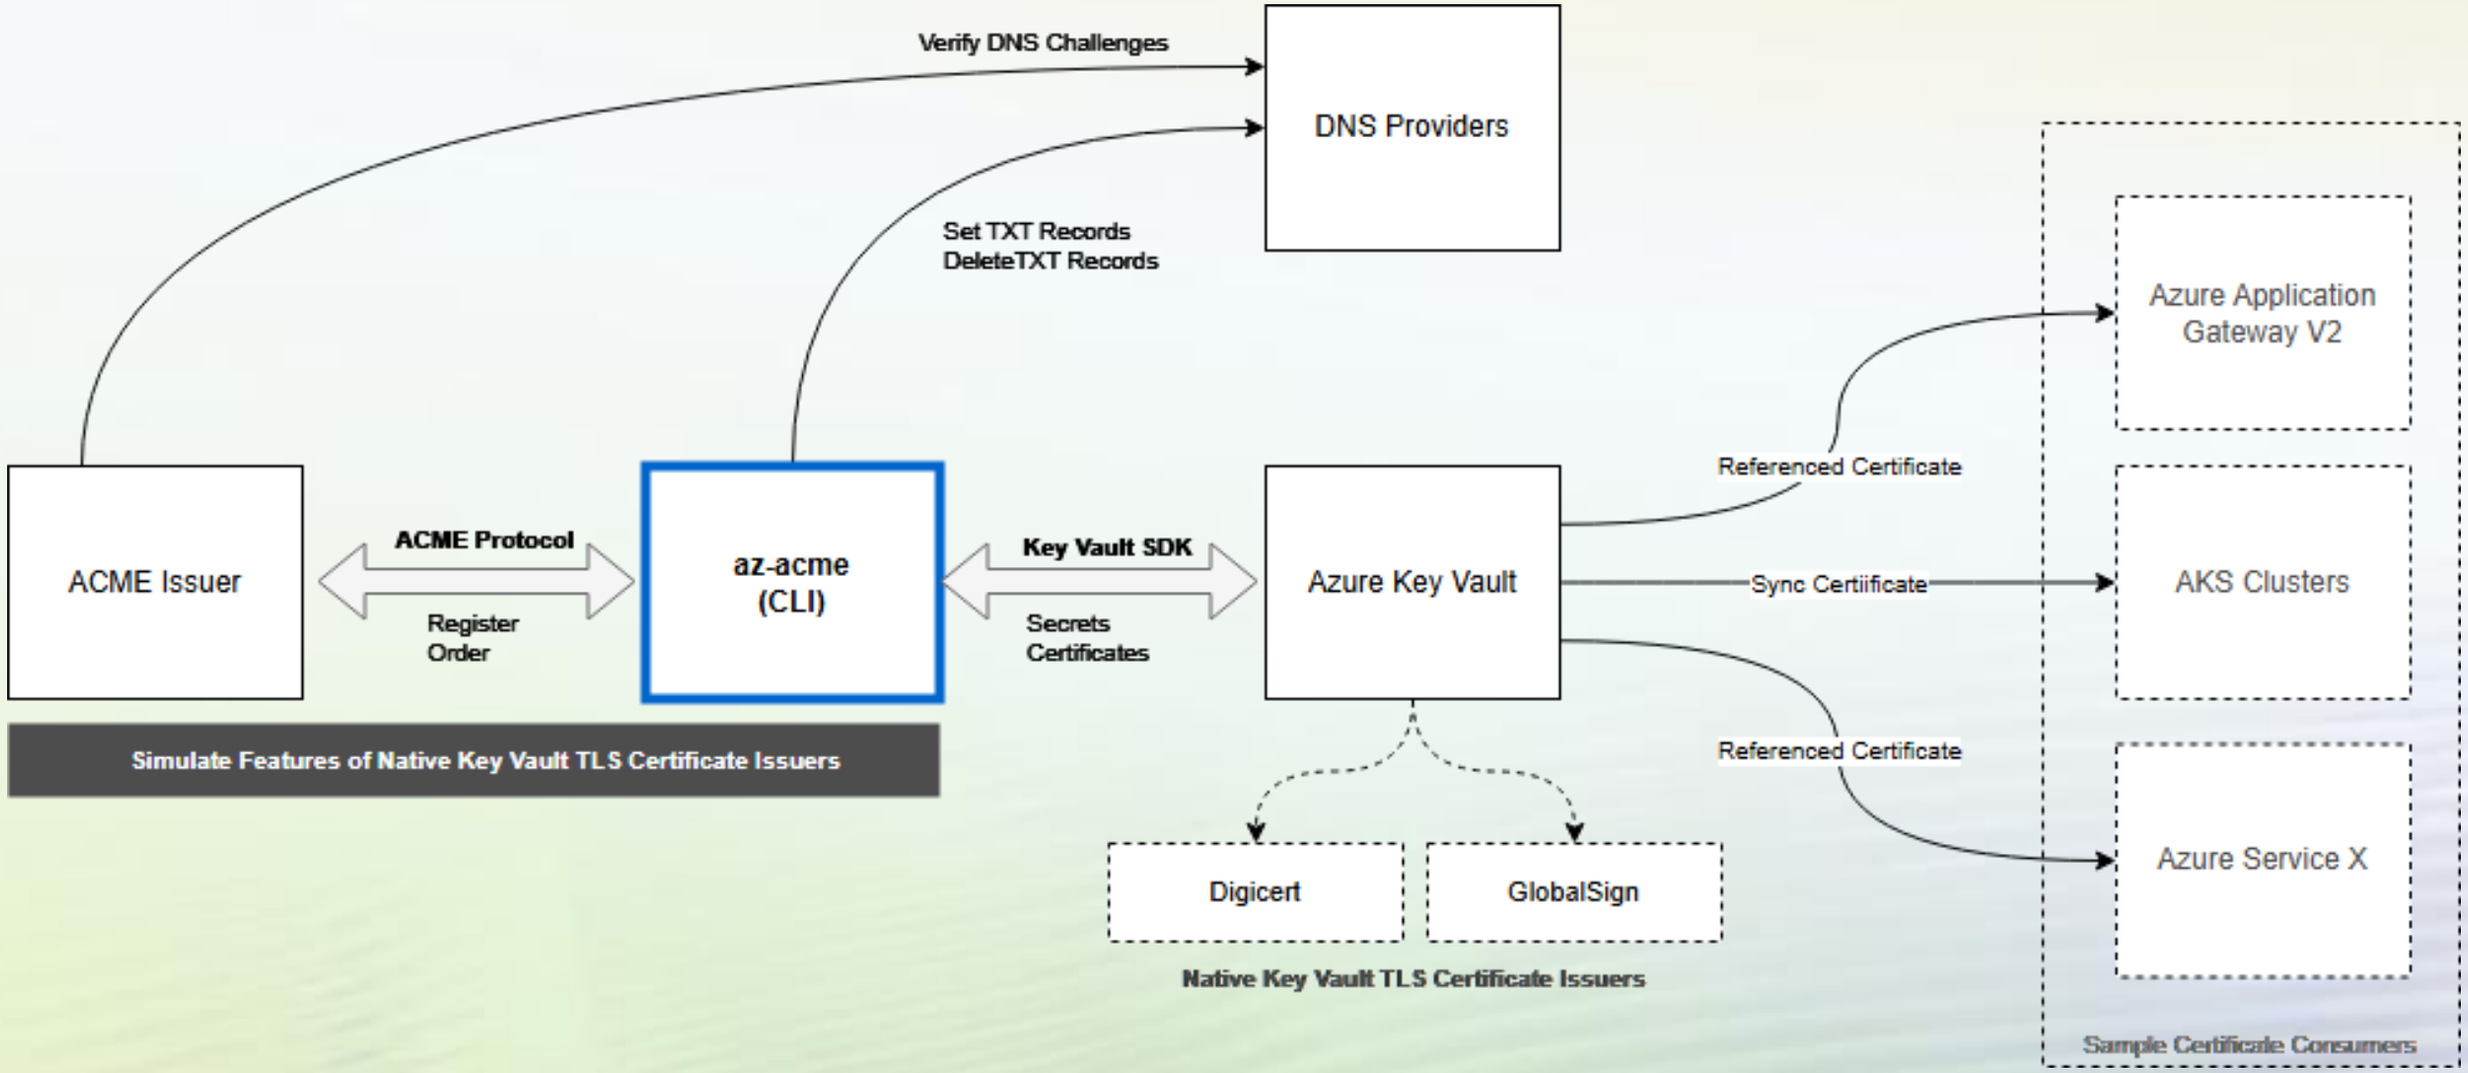

alveo EXPERTISE V-Valley AvePoint Qumulo TD SYNNEX EXTRA-NET

AZ ACME

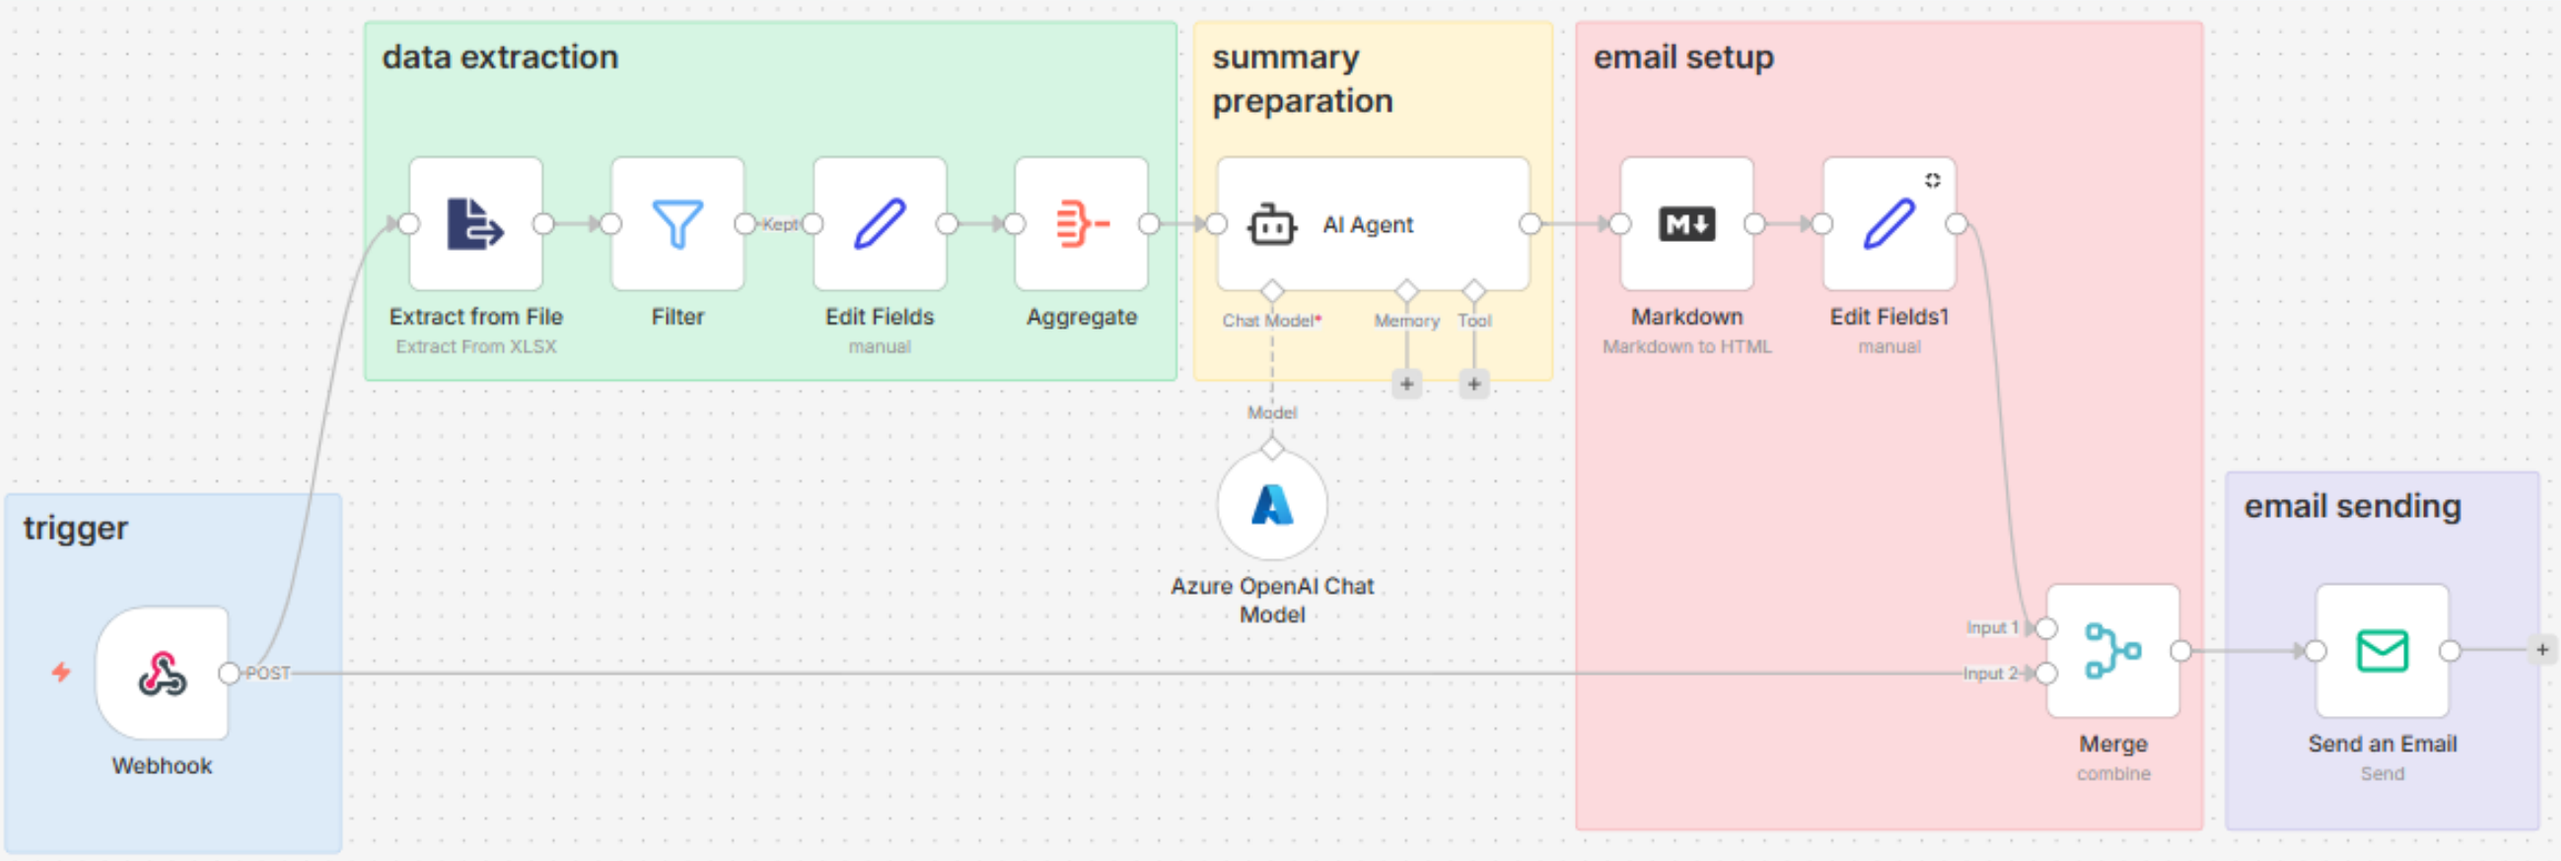

A specialized utility used to automate SSL certificate issuance and renewal via the ACME protocol for various Azure services

EXTRA-NET

AZQR

show

compare

openai-throttling

AZQR

SHOW

it launches an interactive local web dashboard to explore and visualize Azure Quick Review results from Excel or JSON report files

alveo EXPERTISE V-Valley AvePoint Qumulo TD SYNNEX EXTRA-NET

AZQR

COMPARE

it identifies configuration differences between two scan reports, allowing you to track infrastructure changes or drifts by comparing "before" and "after" scans

AZQR

OPENAI-THROTTLING

it monitors Azure OpenAI and Cognitive Services for HTTP 429 errors to help identify capacity constraints and optimize deployment configurations

alveo EXPERTISE V-Valley AvePoint Qumulo TD SYNNEX EXTRA-NET

ARI

drawio

ARI

DRAWIO

it generates a specialized XML file that can be imported into Draw.io to automatically create visual network topology diagrams

alveo EXPERTISE V-Valley AvePoint Qumulo TD SYNNEX EXTRA-NET

AZ ACME

register

order

AZ ACME

REGISTER

a one-time operation to create an account with the ACME issuer. It generates a private key and stores it securely as a secret in Azure Key Vault for future authentication

alveo EXPERTISE V-Valley AvePoint Qumulo TD SYNNEX EXTRA-NET

AZ ACME

ORDER

the command used to request, validate, and download a TLS certificate. It handles the domain ownership challenge and automatically stores the resulting certificate in your specified Azure Key Vault
